## **L<sup>A</sup>T<sub>E</sub>X input to ACM journals**

To the Editor:

I am in contact with ACM about the possibility of authors providing camera-ready copy or L<sup>A</sup>T<sub>E</sub>X input files to ACM journals, bypassing the typesetting/proofreading hassles involved in publication. I'm interested in finding a few authors who have articles, produced in L<sup>A</sup>T<sub>E</sub>X, that have been submitted to ACM journals and would like to be guinea pigs for a new procedure.

Authors interested in this experiment should communicate via the Arpanet.

## **Translators to Generate T<sub>E</sub>X files**

To the Editor:

Does anybody have a program to translate RUNOFF or BOLIO source documents to T<sub>E</sub>X (or L<sup>A</sup>T<sub>E</sub>X)? These could be written in almost any language (including my favorites: TECO, SNOBOL, Lisp, and Scan).

I will settle for 95% solutions...
