In many document systems, there is a need for lists of indented paragraphs marked by numbers, bullets, letters, or other symbols. This article describes the design of a TeX macro package that provides such a facility with examples of the use of the macros and a listing of their source.

- An author indicates in a TeX input file that a list is to begin with a call to a start-of-list macro. The start-of-list macros indicate the type of list.

1. Lists begun with the following macros are marked with numbers or letters enclosed in parentheses:
   a. \numberlist — Arabic numerals
   b. \romanlist — lower-case Roman numerals
   c. \ROMANLIST — upper-case Roman numerals
   d. \alphalist — lower-case letters
   e. \ALPHALIST — upper-case letters

2. Lists begun with the following macros are marked with numbers or letters followed by a period:
   a. \dotnumberlist — Arabic numerals
   b. \dotromanlist — lower-case Roman numerals
   c. \DOTROMANLIST — upper-case Roman numerals
   d. \dotalphalist — lower-case letters
   e. \DOTALPHALIST — upper-case letters

3. Lists begun with the following macros are marked with numbers or letters that have no surrounding punctuation:
   a \nopuncnumberlist — Arabic numerals
   b \nopuncromanlist — lower-case Roman numerals
   c \NOPUNCTROMANLIST — upper-case Roman numerals
   d \nopuncalphalist — lower-case letters
   e \NOPUNCTALPHALIST — upper-case letters

4. Lists begun with the following macros are marked with numbers or letters followed by a
right parenthesis:

a) \closenumberlist — Arabic numerals
b) \closerromanlist — lower-case Roman numerals
c) \CLOSEROMANLIST — upper-case Roman numerals
d) \closelectalist — lower-case letters
e) \CLOSEALPHALIST — upper-case letters

(5) The macro \bulletlist starts a list of items marked by bullets.

(6) The macro \dashlist starts a list of items marked by em-dashes.

(7) The macro \marklist {<mark>} starts a list in which each item is marked by the string specified as <mark>.

- A call to the macro \listitem should precede each item (including the first one) on a list except when the list items occur within tables. This macro inserts the list mark specified by the start-of-list macro, causes the following text to appear in indented blocked paragraphs, and increments numeric and alphabetic marks.

- The user may specify a mark for a particular item by using the macro \markitem {<mark>} instead of \listitem. Lists in which every mark is specified in this fashion may be begun with \startlist instead of one of the start-of-list macros enumerated above. Warning: Spaces and carriage returns following macro names are insignificant; in fact, when a macro such as \listitem has no parameters, unless the following text begins with a special character, a space or carriage return is required to delimit the macro name. However, the \TeX{} spacing conventions cause a space or carriage return after the right brace that ends the mark specified with \markitem to result in additional space between the mark and the beginning of the list item. As a result of these conventions the input

\begin{verbatim}
\listitem
  Note the position of the first word here.
\end{verbatim}

is equivalent to

\begin{verbatim}
\listitem Note the position of the first word here.
\end{verbatim}

while

\begin{verbatim}
\listitem Note the position of the first word here.
\end{verbatim}

would result in an error, because the macro \listitem has not been defined. However, while

\begin{verbatim}
\markitem{A---}
  Note the position of the first word here.
\end{verbatim}

is equivalent to

\begin{verbatim}
\markitem{A---} Note the position of the first word here.
\end{verbatim}

the two latter probably do not produce what the user intended and are not equivalent to the correct form

\begin{verbatim}
\markitem{A---} Note the position of the first word here.
\end{verbatim}

- Lists may occur within other lists—up to four levels of nesting are permitted.

- The macro \listmark can be used within tables to insert the current list mark. Like \listitem, \listmark increments numeric and alphabetic marks. It does not, however, affect the current
List Macros

paragraph structure.

- The end of a list is indicated by the macro `\endlist`.

- The \TeX{} control sequence `\par` used to indicate the end of paragraphs should not be included before the beginning of a list or before calling `\item`. However, individual items may contain several paragraphs separated by calls to `\par`.

- **Warning:** A blank line or a line containing only a comment is treated by \TeX{} identically to the control sequence `\par`. Normally, several adjacent calls to `\par` are equivalent to a single call, so that one or more blank lines or comment lines can appear between paragraphs. Within lists, however, `\par` is redefined so that successive paragraphs will have the appropriate indentation. Multiple calls to `\par` within lists can create unexpected results. Therefore, blank lines and comment lines should be avoided within lists.

These features are illustrated in the following example taken from Acts II and III of Hamlet:
What a piece of work is a man! How noble in reason!
How infinite in faculty, in form and moving! How express and
admirable in action! How like an angel in apprehension!
How like a god! The beauty of the world! The paragon of animals!
And yet, to me, what is this quintessence of
dust? To be, or not to be: that is the question. Whether:

'Tis nobler in the mind to suffer the slings and arrows of
outrageous fortune; or
To take arms against a sea of troubles,
and by opposing, end them.

To die; to sleep; no more;
And by a sleep to say we end the heart-ache and the thousand natural shocks
that flesh is heir to.

'Tis a consumation devoutly to be wish'd.
To die; to sleep;—to sleep?
Perchance to dream! Ay, there's the rub.
For in that sleep of death what dreams may come, when we have shuffl'd off
this mortal coil, must give us pause. There's the respect
that makes calamity of so long life.

Thus conscience does make cowards of us all; and thus the native hue
of resolution is sicklied o'er with the pale cast of thought, and enterprises
of great faith and moment with this regard their current turn awry, and lose
the name of action.

Figure 1. Nested Lists—Sample Input
What a piece of work is a man! How noble in reason! How infinite in faculty, in form and moving! How express and admirable in action! How like an angel in apprehension! How like a god! The beauty of the world! The paragon of animals! And yet, to me, what is this quintessence of dust?...

(1) To be, or not to be: that is the question. Whether:
   (a) 'Tis nobler in the mind to suffer the slings and arrows of outrageous fortune; or
   (b) To take arms against a sea of troubles, and by opposing, end them.

(2) To die; to sleep; no more;
   (a) And by a sleep to say we end the heart-ache and the thousand natural shocks that flesh is heir to.
   (b) 'Tis a consumation devoutly to be wish'd.

(3) To die; to sleep;—to sleep! Perchance to dream! Ay, there's the rub. For in that sleep of death what dreams may come, when we have shuff'd off this mortal coil, must give us pause. There's the respect that makes calamity of so long life.

... Thus conscience does make cowards of us all; and thus the native hue of resolution is sicklied o'er with the pale cast of thought, and enterprises of great faith and moment with this regard their currents turn awry, and lose the name of action.

Figure 2. Nested Lists—Sample Output

The example below shows the use of the list macros in conjunction with \TeX's alignment feature (the latter is used to produce tables). Alignment is described in Chapter 22 of the \TeX manual.
List Macros

\numberlist
\ctrlin{Menu}
\ctrlin{June 25, 1980}
\vskip 4ex
\ctrlin{\vbox{\halign{\hfill\quad\hfill\cr
\listmark|Tomato Bisque Soup\cr
\listmark|Spinach Salad\cr
\listmark|Tuscan Pot Roast\cr
\listmark|Zucchini Soufflé\cr
\listmark|Rice Pilaf\cr
\listmark|Braised Onion Bread\cr
\listmark|Cream Puff Swans\cr
}}}
\endlist

Figure 3. Lists Within Tables—Sample Input

<table>
<thead>

</tbody>
</table>

Figure 4. Lists Within Tables—Sample Output

The remainder of this article describes details about the list macros that many readers may wish to skip.

- The indentation for all levels of nested lists is determined by the font in effect when the outermost list is started. Each level of list is indented by an amount of space equivalent to 4 ems in the initial font. This default may be changed by setting \varunit <dimen> where <dimen> is the amount of indentation desired. (See Figures 5 and 6 below.)

- The list macros use the single "variable unit" provided by \TeX. Therefore, the user must not redefine \varunit except to change the indentation of list items as described above.

- Since \TeX's \par control sequence is used to end a paragraph rather than to start a new one, \par
List Macros

should not precede the text of list items. Nevertheless, to ensure proper indentation within lists, a macro call is necessary at the beginning of each paragraph. The required spacing information is provided at the beginning of list items by the macros \listitem and \markitem \textmark and by \par before succeeding paragraphs. A special case occurs, however, after the \endlist that follows a list that appears within another list when the following text is part of the same list item in the outer list as the one that contained the inner list. In this situation, the \endlist that ends the inner list should be immediately followed by \continue. However, the \endlist that ends the outermost list can be immediately followed by the text of the following paragraph. These situations (and the \varunit construct discussed above) are illustrated in the following example:

\startlist  
\listitem Can use any weapon.\listitem Can wear armor, including magic armor. \listitem Can do no magic.\listitem Become harder to kill as they become more experienced.\endlist  
\markitem\it Magic Users: \textmark Any human character can also be a magic user. Magic users cannot wear armor or use most magical weapons. They can, however, use all other magic items and they can cast spells.\endlist  

The game is played as a series of adventures. Players may play the same character for several adventures, and the character gains in experience as it survives each adventure.

Figure 5. Use of \continue—Sample Input
TSR Games manufactures rule books, character records, polyhedral dice, and other accessories for playing the fantasy role-playing game, "Dungeons and Dragons®. Each player creates a character whose traits are determined by rolling dice. The resulting characters belong to one of several classes including:

**Fighters**: Any human character can be a fighter as are most halflings, dwarves and elves. Fighters

* Can use any weapon.
* Can wear armor, including magic armor.
* Can do no magic.
* Become harder to kill as they become more experienced.

**Thieves**: Human characters can be thieves. Thieves have special abilities:

- They can survive attacks from behind.
- They can climb sheer surfaces.
- They can pick locks and pockets.

Special rules exist for halflings, dwarves, and elves who are thieves.

**Magic Users**: Any human can also be a magic user. Magic users cannot wear armor or use most magical weapons. They can, however, use all other magic items and they can cast spells.

The game is played as a series of adventures. Players may play the same character for several adventures, and the character gains in experience as it survives each adventure.

---

**Figure 6. Use of \continue—Sample Output**

- Block paragraph structure is used inside lists. At the end of a list, paragraph indentation is reset according to the value specified in the macro \saveparindent. Users of standard macro packages need not concern themselves with the latter. Users, however, who design their own formats should know that the default value is 2 ems in the current font. To select another value, use

\def\saveparindent{<dimen>}

The slide macros, for example, which assume block paragraph structure throughout, include the command

\def\saveparindent{0 pt}

(here 0 is the number zero not the letter O).
List Macros

- Since each list item is assumed to start a new paragraph, the same amount of vertical space that TeX inserts between paragraphs is inserted between list items. When the list items are very short, this amount of white space is excessive. The space between paragraphs is controlled with the TeX command \parskip <dimen>, where, following Knuth's notation, <dimen> may be any dimension or size. For example, \parskip Opt completely suppresses extra spacing between list items. Figure 7 illustrates how this command was used at the beginning of this article. Note the use of TeX's grouping feature (braces) to indicate that the change in \parskip should have effect only within the inner lists.

\small

\begin{verbatim}
\numberlist\listitem
Lists begun with the following macros are marked with numbers or letters enclosed in parentheses:
\alphalist
\listitem{ty \numberlist} --- Arabic numerals
{\parskip Opt
\listitem{ty \romanlist} --- lower-case Roman numerals
\listitem{ty \ROMANLIST} --- upper-case Roman numerals
\listitem{ty \alphalist} --- lower-case letters
\listitem{ty \ALPHALIST} --- upper-case letters
\endlist
\endverbatim
\end{verbatim}

Lists begun with the following macros are marked with numbers or letters followed by a period:
\dotalphalist
\listitem{ty \dottypelist} --- Arabic numerals
{\parskip Opt
\listitem{ty \dotromanlist} --- lower-case Roman numerals
\listitem{ty \DOTROMANLIST} --- upper-case Roman numerals
\listitem{ty \dotalphalist} --- lower-case letters
\listitem{ty \DOTALPHALIST} --- upper-case letters
\endlist
\endlist
\end{verbatim}
