Abstract

The goal of Humanist is to Humanize L\TeX. It is a concept, a document markup syntax and a package of programs, macros and fonts. The concept of Humanist is the use of word processors as “rich” \TeX input devices. The user shall input, edit and store a document in the most friendly and natural manner (in other words, without a single \LaTeX command), and be provided with syntactically correct and platform-independent \LaTeX output. The document input, markup and editing is done using any word processor with RTF output and TrueType (or PostScript) screen display possibilities (for example Word and WordPerfect for Mac, Windows, NeXT, X-Window etc.). Humanist will convert the RTF output into \LaTeX code.
