

NAME

e2pall – convert all EPS files in a LaTeX document to PDF

SYNOPSIS

e2pall *TEXFILE*

DESCRIPTION

e2pall searches through *TEXFILE* for `\includegraphics` commands to find the base names of image files. When it finds one, **e2pall** runs **epstopdf(1)** to create a PDF file from the EPS file.

e2pall will check to be sure that an existing PDF file is up-to-date with the EPS file, and will not run **epstopdf(1)** if the PDF file is newer than the EPS file.

BUGS

Email bug reports to <<https://lists.tug.org/tex-k>> (public mailing list).

Seems to be broken

Cannot handle `\input{filename}` or `\includegraphics{filename}` split over more than one line

Must be run from same directory as the LaTeX file

Does not look down `$TEXINPUTS`

Cannot handle documents that use `\include` commands

Assumes *all* files included with `\includegraphics` are EPS files

SEE ALSO

epstopdf(1)

AUTHOR

e2pall was written by Jody Klymak and published in a posting to the <pdftex@tug.org> (mailing list).

This manual page was written by C.M. Connelly for the Debian GNU/Linux system. It is now maintained as part of TeX Live.
