The \texttt{amscd} package

Frank Mittelbach  Rainer Sch"opf  Michael Downes

Version v2.1, 2017/04/14

This file is maintained by the \TeX{} Project team. Bug reports can be opened (category \texttt{amslatex}) at \url{https://latex-project.org/bugs/}.

1 Introduction

The \texttt{amscd} package provides a \texttt{CD} environment that emulates the commutative diagram capabilities of \texttt{AMSL}\TeX version 2.x. This means that only simple rectangular diagrams are supported, with no diagonal arrows or more exotic features. Many users will be better served by one of the more powerful diagram packages such as \texttt{diagram}, \texttt{xypic}, or \texttt{kuvio}.

Example:

\begin{equation}
\begin{CD}
S^{\mathcal{W}_\Lambda}\otimes T @>j>> T \\
@VVV @VV{\End P}V \\
(S\otimes T)/I @= (Z\otimes T)/J
\end{CD}
\end{equation}

(assuming \texttt{\End} is defined as an ‘operator name’).

Another example:

We will make liberal use of Cichon’s Diagram \cite{C}:

\begin{equation}
\begin{CD}
cov(L) @>>> \text{non}(K) @>>> \text{cf}(K) @>>> \text{cf}(L) \\
\downarrow @. \uparrow @. \uparrow @. \downarrow \\
\text{add}(L) @>>> \text{add}(K) @>>> \text{cov}(K) @>>> \text{non}(L)
\end{CD}
\end{equation}

\cite{C}
\add(\mathcal{L}) @>>> \add(\mathcal{K}) @>>> \cov(\mathcal{K}) @>>> \non(\mathcal{L})
\end{CD}
\end{equation}

Standard package info.
\NeedsTeXFormat{LaTeX2e}% LaTeX 2.09 can't be used (nor non-LaTeX)
[1994/12/01]% LaTeX date must December 1994 or later
\ProvidesPackage{amscd}[2017/04/14 v2.1 AMS Commutative Diagrams]
\RequirePackage{amsgen}

Better not to redefine \texttt{\math@cr} if it is already defined, because for CD use only
we want to omit the part of the code related to \texttt{\dspbrk@v1} (see \texttt{amsmath.sty}).

[mjd,1999/11/04] These definitions have gone somewhat obsolete; but we
had probably better leave them as they are for backward compatibility.

@ifundefined{math@cr}{%
\def\math@cr{{\ifnum0='}{fi

I'll assume you wanted @@ for a printed @.}}{}
\@ifundefined{minaw@}{\newdimen\minaw@}{}
\@ifundefined{bigaw@}{\newdimen\bigaw@}{}
Assignment of a couple of dimensions, and initialization of \texttt{\ampersand@}. We check to see if we need to define \texttt{\minaw@} and \texttt{\bigaw@}.
\minaw@11.111pt
\newdimen\minCDarrowwidth\minCDarrowwidth2.5pc
\let\ampersand@=\restore@math@cr\default@tag
Added \texttt{\restore@math@cr\default@tag} to fix line numbering problems, 7-JUN-1991. Suggested by I. Zakharevich.
\newenvironment{CD}{%
\CD@check \This check is used by all macros that must not appear outside the CD environment. The first argument is the symbol to be used after @, the second one the action to be performed.

Once again we use the trick of defining a temporary control sequence \next@ and calling it after the final \fi. This is not absolutely necessary, but it ensures that the conditional text is processed in one and the same column of the enclosing alignment.

\def\CD@check#1#2{\ifCD@ \DN@{#2}\else \DN@{\PackageError{amscd}{@\protect#1 not allowed outside of the CD environment}{@eha}}\fi\next@}

\atdef@>#1>#2>{\ampersand@

\atdef@.{\CD@check.{&&}}%

The \pretend command has weird syntax that doesn’t fit well with standard \LaTeX syntax so we leave it undone, at least for now. [mjd,1994/10/27]
%\def\pretend#1\haswidth#2{\setboxz@h{$\m@th\scriptstyle{#2}$}\hbox to\wdz@{$\m@th\scriptstyle{#1}$\hfill}}

The usual \endinput to ensure that random garbage at the end of the file doesn’t get copied by docstrip.
\endinput
