The numeric-comp style

This style is similar to numeric except that a list of multiple citations is sorted and any sequence of more than two consecutive numbers is formatted as a range. This style will implicitly enable the sortcites package option at load time.

Additional package options

The subentry option

The option subentry affects the handling of citations referring to members of a reference set. If this option is enabled, such citations get an extra letter which identifies the member (it is also printed in the bibliography): \[4a, 4c, 5, 7b, 7c\]. This option is disabled by default, but it has been enabled in this example. If disabled, citations referring to a set member will point to the entire set, i.e., the above citations would come out as \[4, 5, 7\].

Multiple citations

\[1, 2\]
\[1, 3, 5, 8\]
\[1, 3, 6, 9\]
\[4b, 7c\]

Multiple citations with \texttt{supercite}

This is just filler text \[1\]
This is just filler text \[1, 4\]
This is just filler text \[1, 4, 5\]
This is just filler text \[1, 3\]
This is just filler text \[1, 2\]
