The **authoryear-icomp** style

This style combines the features of **authoryear-ibid** and **authoryear-comp**. It will implicitly enable the **sortcites** package option at load time. This style is intended for citations given in footnotes.

**Additional package options**

**The ibidpage option**

The scholarly abbreviation *ibidem* is sometimes taken to mean both ‘same author + same title’ and ‘same author + same title + same page’ in traditional citation schemes. By default, this is not the case with this style because it may lead to ambiguous citations. With **ibidpage=true** a page range postnote will be suppressed in an *ibidem* citation if the last citation was to the same page range. With **ibidpage=false** the postnote is not omitted. Citations to different page ranges than the previous always produce the page ranges with either setting. The default setting is **ibidpage=false**.

Consider the following example citations

\cite[378]{sigfridsson} \cite[378]{sigfridsson} \cite[12]{worman} \cite[13]{worman}

If **ibidpage** is set to **true**, the citations come out as

Sigfridsson and Ryde 1998, p. 378
ibid.
Worman 2002, p. 12
ibid., p. 13

The result for **ibidpage=false** is

Sigfridsson and Ryde 1998, p. 378
ibid., p. 378
Worman 2002, p. 12
ibid., p. 13

**The dashed option**

By default, this style replaces recurrent authors/editors in the bibliography by a dash so that items by the same author or editor are visually grouped. This feature is controlled by the package option **dashed**. Setting **dashed=false** in the preamble will disable this feature. The default setting is **dashed=true**.

**The mergedate option**

Since this style prints the date label after the author/editor in the bibliography, there are effectively two dates in the bibliography: the full date specification (e.g., “2001”, “June 2006”, “5th Jan. 2008”, whose format is controlled by the
date option) and the date label (e.g., “2006a”, whose format is controlled with the labeldate option), as found in citations. The mergedate option controls whether or not date specifications are merged with the date label. This option is best explained by example. Note that it only affects the bibliography. Citations use the date label only.

Doe 2000
Doe 2003a
Doe 2003b
Doe 2006a
Doe 2006b
Doe 2017

mergedate=false strictly separates the date specification (following date) from the date label (following labeldate). The year will always be printed twice:

mergedate=minimum omits the date whenever the full date and the date label have exactly the same precision (date-time granularity).

mergedate=basic is similar in concept but more economical. It will also omit the date if it differs from the date label only by extradate.

mergedate=compact merges all date specifications with the date labels. The merged date is printed in date format, not labeldate, even if it is printed in
the position of the date label. The issue field is still treated specially:

mergedate=maximum strives for maximum compactness. Like mergedate=compact
this option merges the date into the date label. Even the issue field is merged
with the date label:

mergedate=true is an alias for mergedate=compact. This is the default setting.

**Hints**

If you want terms such as *ibidem* to be printed in italics, redefine \mkibid as follows:

\renewcommand*{\mkibid}{\emph}
