The \texttt{fnpct} package basically does two things to footnotes: if footnote marks are followed by a punctuation mark the order of footnote and punctuation mark is reversed and the kerning gets adjusted. As a side effect a new method of creating multiple footnotes and some other features are provided.
1 License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (LPPL), version 1.3 or later (http://www.latex-project.org/lppl.txt). The software has the status "maintained."

\textsc{fnpcf} depends on the packages \texttt{l3kernel}, \texttt{xparse} and \texttt{l3keys2e} from the \texttt{l3packages} bundle, \texttt{scrlfile} from the KOMA-Script bundle, and translations [Nie15].

2 What’s it all about?

2.1 Introduction

The purpose of this package is to offer kerning for footnote marks, i.e. the superscripts. This is not appropriate for all superscripts. Symbols must be handled differently than numbers. And of course the amount depends on the chosen font. Robert Bringhurst says in \textit{The Elements of Typographic Style}:

Superscripts frequently come at the ends of phrases or sentences. If they are high above the line, they can be kerned over a comma or period, but this may endanger readability, especially if the text is set in a modest size. \textit{The Elements of Typographic Style [Bri04]}

\textsc{fnpcf} can not make these decisions for you. It sets some initial values for the comma and the full stop which looked good to me with the tested fonts. Additionally it kerns the superscripts away from words when it follows directly. The amounts of the kerning can be changed using an option.

As a side effect \textsc{fnpcf} switches the order of the superscript and the following comma or full stop. Additional punctuation marks can be added to the switching behaviour and the amount of kerning can be set for each punctuation mark individually.

2.2 Basics

The \textsc{fnpcf} package basically does two things to footnotes: if footnote marks are followed by a comma or a full stop the order of footnote and punctuation mark is reversed and the kerning gets adjusted. As a side effect a new method of creating multiple footnotes is provided, see section 4 for details.

In what way is the kerning adjusted? After being placed behind the punctuation mark the footnote mark is moved a little bit back, namely by the amount specified with the option \texttt{after-punct-space} (see section 3). If the footnote mark follows a word \textit{without} being followed by a punctuation, there (obviously) is no order switching and a little space is inserted before

---

1. More punctuation marks can be added through a package option.
2. like
3. this
4. Well, it does not necessarily have to follow a word. The important point is \textit{not being followed} by a punctuation mark.
2 What’s it all about?

the footnote mark, namely the amount specified by the option \texttt{before-footnote-space} (see section 3).

\begin{verbatim}
\renewcommand{thempfootnote}{\arabic{mpfootnote}}
\end{verbatim}

Now, let’s see some action:

\begin{verbatim}
\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.
\end{minipage}
\end{verbatim}

The three little pigs built their houses out of straw,\footnote{not to be confused with hay} sticks\footnote{or lumber according to some sources} and bricks.\footnote{probably fired clay bricks}

To ensure that the kerning is set the right way the footnote must be placed \texttt{before} the full stop or the comma. The command can look ahead but not look back. This means if you place the \texttt{footnote} command after a full stop or a comma it is treated as if following a word, \textit{i.e.} a thin space is inserted: effectively the opposite of the desired behaviour.

The order-switching can be prevented using a package option since not all countries and languages have the same typographic conventions. In this case the full stop and the comma are moved a bit back.

<tr>
<td>text\footnote{1}</td>
<td>text\footnote{1}</td>
</tr>
<tr>
<td>text\footnote{1}</td>
<td>text\footnote{1}</td>
</tr>
</tbody>
</table>

\textbf{Figure 1:} The effect of FNPCT.

\texttt{punct-after = true|false}

When \texttt{true} the punctuation sign will be placed \texttt{after} the footnote.
2 What’s it all about?

Like all options it can also be set using the setup command.

\setfnpct{⟨options⟩}

Set up options. Can be used anywhere in the document. Some options can only be set in the preamble, though.

\begin{minipage}{\linewidth}

\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.

\end{minipage}

The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.

2.3 Temporarily disable or enable switching

One maybe want to put some footnote marks before the punctuation and some after, for example because the first one describes a single word but the second one a whole sentence. For this purpose \texttt{FNPCT} adds a * argument to \texttt{\footnote} and \texttt{\footnotemark}. The complete new syntax now is as follows:

\footnote*{⟨⟨num⟩⟩}{⟨footnote text⟩}{⟨tpunct⟩}

new * argument added. ⟨tpunct⟩ is the optional trailing punctuation mark.

\footnotemark*{⟨⟨num⟩⟩}{⟨tpunct⟩}

new * argument added. ⟨tpunct⟩ is the optional trailing punctuation mark.

The * argument temporarily turns off the punctuation/footnote switching. In case you set \texttt{punct-after = {true}} the * argument temporarily enables the switching.

\begin{minipage}{.4\linewidth}

\noindent The three little pigs built their houses out of straw\footnote*{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.

\end{minipage}
The three little pigs built their houses out of straw\footnote*{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.

### 2.4 Language Specific Settings

Package babel’s [Bra16] French settings redefine \@footnotemark. \texttt{FNPCT} resets this redefinition but sets the \texttt{before-footnote-space} equal to a thin space (\texttt{.1667em}).

### 3 Options

Most package options are listed below. They all can be set as a package option or with the \texttt{setfnpct} command. Most of them are for adjusting the kerning.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>\texttt{after-dot-space = {\texttt{dim}}}</td>
<td>Space to be inserted after a footnote mark and before the full stop (“footnote after dot”). A negative space will move the full stop further to the footnote mark. Default: \texttt{-.06em}</td>
</tr>
<tr>
<td>\texttt{after-comma-space = {\texttt{dim}}}</td>
<td>Space to be inserted after a footnote mark and before the comma (“footnote after comma”). A negative space will move the comma further to the footnote mark. Default: \texttt{-.06em}</td>
</tr>
<tr>
<td>\texttt{after-punct-space = {\texttt{dim}}}</td>
<td>Set all spaces, i.e. also the ones for marks you’ve added with \texttt{add-punct-marks}.</td>
</tr>
</tbody>
</table>
3 Options

\texttt{punct-after} = \texttt{true}|false \hspace{1cm} \text{Default: false}

When \texttt{true} the punctuation sign will be placed \textit{after} the footnote.

\texttt{before-dot-space} = \{\langle\text{dim}\rangle\} \hspace{1cm} \text{Default: -\.16em}

Space to be inserted after a footnote mark and before the full stop ("footnote \textit{before dot}"), \textit{i.e.} with \texttt{punct-after} = \{\texttt{true}\}.

\texttt{before-comma-space} = \{\langle\text{dim}\rangle\} \hspace{1cm} \text{Default: -\.16em}

Space to be inserted after a footnote mark and before the comma ("footnote \textit{before comma}"), \textit{i.e.} with \texttt{punct-after} = \{\texttt{true}\}.

\texttt{before-punct-space} = \{\langle\text{dim}\rangle\}

Set \textit{all} spaces, \textit{i.e.} also the ones for marks you’ve added with \texttt{add-punct-marks}.

\texttt{before-footnote-space} = \{\langle\text{dim}\rangle\} \hspace{1cm} \text{Default: .06em}

Space to be inserted between a word and the following footnote mark.

\texttt{dont-mess-around} = \texttt{true}|false \hspace{1cm} \text{Default: false}

Sets all mentioned lengths to 0pt and \texttt{punct-after} = \{\texttt{true}\}. Basically this should look like as if you hadn’t loaded \texttt{fnpct} except the multiple footnote commands and \texttt{innernote} are still available, see sections 4 and 5, respectively.

\texttt{multiple} = \texttt{true}|false \hspace{1cm} \text{Default: false}

Lets \texttt{footnote} be equal to \texttt{multfootnote}.

\texttt{mult-fn-delim} = \{\langle\text{delimiter}\rangle\} \hspace{1cm} \text{Default: ;}

Sets the delimiter for the \texttt{multfootnote} command.

\texttt{mult-fn-sep} = \{\langle\text{separator}\rangle\} \hspace{1cm} \text{Default: ,}

Sets the separator between multiple footnote marks.

\texttt{normal-marks} = \texttt{true}|false \hspace{1cm} \text{Default: false}

Sets the footnote marks in the foot not as superscripts but as normal font. If you’re not using a KOMA-Script class this option will load the package \texttt{scrextend}. See section 6 for more information. \textit{This option can only be set in the preamble.}

So if you want to extend the punctuation switching and kerning to other punctuation marks you can do something like this:

\begin{verbatim}
\setfnpct{add-punct-marks=!?}
\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses\footnote{not to be confused with hay} out of straw\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}!
\end{minipage}
\end{verbatim}
The three little pigs built their houses out of straw? Sticks and bricks!\footnote{not to be confused with hay} Sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}!

Or with some additional spacing:

\setfnpct{add-punct-marks=!,?}
\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.
\end{minipage}

Let’s take a look at an example with some ridiculous settings:

\begin{verbatim}
% some ridiculous settings:
\setfnpct{after-punct-space=2pt, before-footnote-space=2pt}
\begin{minipage}{.4\linewidth}
  The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.
\end{minipage}
\end{verbatim}
3 Options

The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks.\footnote{probably fired clay bricks}

And now the same with switched order:

\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.
\end{minipage}

In case the automatic kerning doesn’t work for whatever reason the spaces are available as user commands as well:

\kfp
Insert after-dot-space or (if punct-after = \{true\}) before-dot-space.

\kfc
Insert after-comma-space or (if punct-after = \{true\}) before-comma-space.

Some of the options are explained in a bit more detail in the next sections.
4 Multiple footnotes

4.1 Basics

Since multiple footnotes have to be treated differently,\footnote{\textit{FNPMC}} provides an extra command for that:

\begin{itemize}
  \item \texttt{\textbackslash multfootnote*}{\{\texttt{list}\};\{\texttt{of}\};\{\texttt{footnotes}\}}{\texttt{tpunct}}
\end{itemize}

Different footnotes are separated with a semicolon. The * turns the footnote/punctuation switching temporarily off.

\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks; or something else}.
\end{minipage}

Every of the items of the list has an optional argument equivalent to the optional argument of \texttt{\textbackslash footnotetext}:\footnote{see these footnotes for an example}

\begin{itemize}
  \item \texttt{\textbackslash multfootnote*}{\{\texttt{mark}\}}{\texttt{footnote text}}{\ldots}
\end{itemize}

The syntax of \texttt{\textbackslash multfootnote}'s footnote text argument.
The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks\footnotemark;*or something else;what do I know}. Additionally every item has an optional * which only invokes \footnotetext. This enables for example to set nested footnotes without disrupting the multiple setting. The following example is shown in figure 2:

\begin{document}
\begin{minipage}{.4\linewidth}

\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\multfootnote{probably fired clay bricks\footnotemark;*or something else;what do I know}.

\end{minipage}
\end{document}

4.2 The delimiter and separator

Since the semicolon might be part of the footnote text you might have some trouble. But there are ways around. Maybe try enclosing it in braces:

\begin{minipage}{.4\linewidth}

\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay},\footnote{or lumber according to some sources} sticks\footnote{or lumber according to some sources}.

\end{minipage}
4 Multiple footnotes

The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks.\footnote{probably fired clay bricks} or something else \footnote{what do I know}.

There also are options which lets you choose the (input) delimiter and the (output) separator:

\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks; or something else} or something else\footnote{what do I know}.
\end{minipage}

\setfnpct{mult-fn-delim=//,mult-fn-sep=}
The three little pigs built their houses out of straw, sticks and bricks.

1. not to be confused with hay
2. or lumber according to some sources
3. probably fired clay bricks; or something else
4. what do I know

4.3 Automagic

If you want you can turn all footnotes into \multfootnote.

\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw, sticks and bricks.
\end{minipage}

\footnote{not to be confused with hay, \footnote{or lumber according to some sources} \footnote{probably fired clay bricks; or something else}.}

\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw, sticks and bricks.
\end{minipage}

\footnote{not to be confused with hay, \footnote{or lumber according to some sources} \footnote{probably fired clay bricks; or something else}.}

\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw, sticks and bricks.
\end{minipage}

\footnote{not to be confused with hay, \footnote{or lumber according to some sources} \footnote{probably fired clay bricks; or something else}.}

\begin{minipage}{.4\linewidth}
\noindent The three little pigs built their houses out of straw, sticks and bricks.
\end{minipage}

\footnote{not to be confused with hay, \footnote{or lumber according to some sources} \footnote{probably fired clay bricks; or something else}.}
5 Nested Footnotes

\textbf{FNPCT} provides preliminary support for nested footnotes. There are some restrictions, though. The command below can be used inside \texttt{\footnote} and \texttt{\multfootnote}, but not inside another \texttt{\innernote}. \texttt{\innernote} really is a “inner footnote”, it doesn’t work with endnotes, for example.

\begin{verbatim}
\innernote{[⟨mark⟩]{⟨text⟩}{tpunct}}
A nested footnote.
\end{verbatim}

The inner node uses a \texttt{\footnotemark} internally and the mark will be set with the definition it has at begin document.

The output of the following code can be seen in figure 3:

\begin{verbatim}
\documentclass{article}
\usepackage[paperwidth=.5\textwidth, paperheight=12\baselineskip, margin=5pt, bottom=1.5cm]{geometry}
\usepackage{fnpct}
\begin{document}
\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks\footnote*{or not}}.
\end{document}
\end{verbatim}

This is especially useful if you have more than one additional footnote inside a footnote, a case that can’t be solved in a satisfying (\textit{i.e. automatic}) way with the method mentioned in section 4. See figure 4 for the output of this code:
The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks.\footnote{probably fired clay bricks\footnote{just guessing}}\footnote{or not}

\begin{figure}
\centering
\includegraphics[width=\textwidth]{example-a}
\caption{\texttt{\innernote} example (a)}
\end{figure}

\begin{figure}
\centering
\includegraphics[width=\textwidth]{example-b}
\caption{\texttt{\innernote} example (b)}
\end{figure}

\begin{verbatim}
\documentclass{article}
\usepackage[
paperwidth=.5\textwidth,
paperheight=12\baselineskip,
margin=5pt,
bottom=1.5cm]{geometry}
\usepackage{fnpct}
\begin{document}
\indent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably\footnote{just guessing} fired clay bricks\footnote{or not}}.
\end{document}
\end{verbatim}
The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks.\footnote{probably}.

\begin{figure}[h]
\centering
\begin{tabular}{|l|}
\hline
\textbf{\footnotesize\textit{Figure 5:}} \texttt{\textbackslash innernote} example (c) \\
\hline
\end{tabular}
\end{figure}

\texttt{\textbackslash innernote} can also be used to escape minipages. In this case use \texttt{\textbackslash innernote} as a replacement for \texttt{\footnote} and call this command later:

\texttt{\textbackslash writeinnernotes}  

Writes all \texttt{\footnotetext}s to the inner footnotes when invoked. This is usually done automatically by the \texttt{\footnote} command but there are possible needs for it.

See figure 5 for the output of the following code:

\begin{verbatim}
\documentclass{article}
\usepackage{
    paperwidth=.5\textwidth,
    paperheight=12\baselineskip,
    margin=5pt,
    bottom=1.5cm}{geometry}
\usepackage{fnpct}
\begin{document}
\begin{minipage}{.9\linewidth}
The three little pigs built their houses out of straw\innernote{not to be confused with hay}, sticks\innernote{or lumber according to some sources} and bricks\innernote{probably}.
\end{minipage}
\writeinnernotes
\end{document}
\end{verbatim}
6 Normal notes

The three little pigs built their houses out of straw,\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.

---

1. not to be confused with hay
2. or lumber according to some sources
3. probably fired clay bricks

Figure 6: Demonstration of the \texttt{normal-marks} option.

6 Normal notes

The package option \texttt{normal-marks} (see p. 6) changes the layout of the footnote marks in the foot by using KOMA-Script’s \texttt{deffootnote} command:

\begin{verbatim}
\deffootnote[⟨mark indent⟩]{⟨indent⟩}{⟨par indent⟩}{⟨format code⟩}
\end{verbatim}

KOMA-Script’s command to define the output of the footnote text in the foot.

The following code is shown in figure 6.

\begin{verbatim}
\documentclass{article}
\usepackage[paperwidth=.5\textwidth, paperheight=12\baselineskip, margin=5pt, bottom=1.5cm]{geometry}
\usepackage[normal-marks]{fnpct}
\begin{document}
\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}.
\end{document}
\end{verbatim}

The three indent values used by \texttt{FNPC T} can be changed with the following options:
7 Other packages

**normal-mark-width** = \{(dim)\}  
Default: 1em  
The width of the box within which the marks are set.

**normal-indent** = \{(dim)\}  
Default: 1.5em  
The indent of each footnote line except the first.

**normal-par-indent** = \{(dim)\}  
Default: 1em  
Additional indent of a new paragraph inside the footnote text.

7 Other packages

**FNPC** tries its best to support other footnote and related packages. Each of the following subsections is dedicated to one of these packages and if and how they work together with **FNPC**. Fortunately most of them do quite well.

7.1 bigfoot

The bigfoot [Kaso6] package extends the possibilities of the manyfoot package [Rozo5] (see section 7.5). The main visible feature is to use different classes of footnotes which are typeset in different apparatus on the bottom of the page.

**FNPC** is compatible with bigfoot. You need to be a bit cautious, though. You need to *declare footnotes* with \texttt{\DeclareNewFootnote} after loading **FNPC** *but in the document preamble.*

*Also verbatim material won’t work inside footnotes anymore.* But you can of course use Bruno L. Floc’h’s \texttt{cprotect} [Flo11] if you really need verbatim material in footnotes *and* want to use **FNPC**. Since **FNPC** does not redefine any \texttt{\footnotetext} like command it will still work inside one of them.

For every footnote class defined with \texttt{\DeclareNewFootnote} the commands \texttt{\footnote\{class\}} and \texttt{\footnotemark\{class\}} are redefined with the starred variant and a \texttt{\multfootnote\{class\}} is defined. The *multiple* option will turn all \texttt{\footnote\{class\}} commands into the corresponding \texttt{\multfootnote\{class\}}.

**FNPC** has an additional package option which *cannot* be set with \texttt{\setfnpc} and only has any effects if bigfoot has been loaded:

**bigfoot-default-top** = true|false  
Default: false  
Sets the default footnote class as top layer.

Since this document cannot easily combine *every* footnote package at the same time for demonstration purposes the following code is shown in figure 7:

```latex
\documentclass{article}
\usepackage{
  paperwidth=.5\textwidth,
  paperheight=12\baselineskip,
}
```

7. If you find some package missing please let me know.
The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks; or something}\footnote{let alone grass}.

\begin{figure}
\centering
\fbox{
\begin{minipage}{0.9\textwidth}
The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks; or something}\footnote{let alone grass}
\end{minipage}}
\caption{bigfoot example}
\end{figure}

\section{endnotes}

The endnotes \cite{Lavo3} package provides the commands \texttt{\endnote} and \texttt{\endnotemark} which can be used to output all notes at the end of a chapter, say.

If the package is loaded both commands are adapted:\footnote{8.
\texttt{\% `fnpct' does this for you:}
\texttt{\\\\\textbackslash AdaptNote\texttt{\textbackslash endnote}\texttt{\textbackslash multendnote}}
\texttt{\\\\\textbackslash AdaptNoteMark\texttt{\textbackslash endnotemark}}

\footnote{8. see section 8 on manual adaption}
7 Other packages

Everything else stays the same:

\begin{minipage}[]{.4\linewidth}
\indent The three little pigs built their houses out of straw\footnote{not to be confused with hay},
\endnote sticks\footnote{or lumber according to some sources}
\\and bricks\footnote{probably fired clay bricks}.
\end{minipage}\hfil
\begin{minipage}[]{.4\linewidth}
\indent The three little pigs built their houses out of straw\footnote*{not to be confused with hay},
\endnote sticks\footnote{or lumber according to some sources}
\\and bricks\footnotemark[6,7]\footnotemark[6,7,8]probably fired clay bricks or something else.
\end{minipage}

\begin{theendnotes}
\end{theendnotes}
\end{minipage}

The three little pigs built their houses out of straw,\footnote{not to be confused with hay} sticks\footnote{or lumber according to some sources} and bricks.\footnote{probably fired clay bricks}

Notes

\begin{itemize}
\item[\footnote{not to be confused with hay}]
\item[\footnote{or lumber according to some sources}]
\item[\footnote{probably fired clay bricks}]
\end{itemize}

Notes

\begin{itemize}
\item[\footnote*{not to be confused with hay}]
\item[\footnote{or lumber according to some sources}]
\item[\footnote{probably fired clay bricks}]
\item[\footnote{or something else}]
\end{itemize}

7.3 enotes

The enotes [Nie13a] package provides the command \texttt{\endnote} which can be used to output all notes at the end of a chapter, say.

If the package is loaded the command is adapted:\footnote{see section 8 on manual adaption}:

\% `fnpct' does this for you:
\AdaptNote\endnote\multendnote

\end{theendnotes}
7.4 fixfoot

The fixfoot [Fai07] package provides a possibility to create repeating footnotes. \texttt{fnpct} supports this package provided you take care of the following:

\textit{Use} \texttt{\textbackslash DeclareFixedFootnote only in the preamble but after loading \texttt{fnpct}.}

\texttt{\textbackslash DeclareFixedFootnote\{\texttt{cs}\}\{footnote text\}} is used to store the \langle footnote text \rangle in \texttt{cs} which in turn creates a footnote mark for it but doesn’t repeat the footnote text on the same page in the bottom. The document needs several runs to get all the numbers and footnotes right.

Every fixed footnote declared with \texttt{\textbackslash DeclareFixedFootnote} gets an optional * to prevent the punctuation switching. \textit{There is no mult-variant of the fixed notes!}

Since this document cannot easily combine every footnote package at the same time for demonstration purposes the following code is shown in figure 8:

```latex
\documentclass{article}
\usepackage[paperwidth=.55\textwidth,
paperheight=12\baselineskip,
margin=5pt,
bottom=1.5cm]{geometry}
\usepackage{fixfoot}
\usepackage{fnpct}
\DeclareFixedFootnote{\myfn}{I'm confused: what do I want to say?}
\begin{document}
\noindent The three little pigs\myfn\ built their houses out of straw\myfn*, sticks\texttt{footnote} (or lumber according to some sources) and bricks\texttt{footnote} (probably fired clay bricks).
\end{document}
```

7.5 footmisc

The footmisc package [Fai11] provides a range of options to customize footnotes, for example output them as margin notes or count footnotes per page.

Testing showed no incompatibilities with footmisc. The only thing is that you won’t have to (and shouldn’t) use its \texttt{multiple} option.
The three little pigs\textsuperscript{1} built their houses out of straw\textsuperscript{1}, sticks\textsuperscript{2} and bricks.\textsuperscript{3}

\begin{itemize}
  \item [1] I’m confused: what do I want to say?
  \item [2] or lumber according to some sources
  \item [3] probably fired clay bricks
\end{itemize}

\textbf{Figure 8: fixfoot example}

\section{footnote}

Unfortunately \texttt{fnpct} is not compatible with the footnote package \cite{Woo97}. Or more precisely it is not compatible if the command pair \texttt{savenotes/spewnotes} is invoked. This disables footnote’s environments as well as its environment escaping mechanism through \texttt{makesavenoteenv}.

\section{manyfoot}

The manyfoot package \cite{Roz05} is not and will not directly be supported. It is loaded by bigfoot (see section 7.1), anyway. And since the latter states in its documentation

\begin{quote}
  Purpose of this package is to provide a one-stop solution to almost all problems related to footnotes. You can use it as a drop-in replacement of the ‘manyfoot’ package, but without many of its shortcomings, and quite a few features of its own. \textendash \textit{David Kastrup} \cite{Kas06}
\end{quote}

you should probably prefer it anyway.

If it is \textit{really} wanted by users I might change my opinion, though …

\section{pagenote}

The package pagenote \cite{Wil09} is supported and its \texttt{pagenote} command is treated the same way as all other note commands: it got an optional \textbullet{} argument and an additional \texttt{multipagenote} is defined.

\section{parnotes}

The function of the package parnotes \cite{Hug12} is similar to the endnotes package. basically it allows to output the footnote text after a paragraph, either by using a special environment or by invoking \texttt{parnotes}.

If parnotes is loaded \texttt{fnpct} extends its functionality analogous to the one of endnotes. Again the \texttt{multiple} option turns all \texttt{parnotes} into \texttt{multiparnotes}.
The three little pigs built their houses out of straw, sticks and bricks.\footnote{not to be confused with hay, or lumber according to some sources; probably fired clay bricks.}

The three little pigs built their houses out of straw, sticks and bricks.\footnote{not to be confused with hay, or lumber according to some sources; probably fired clay bricks; or something else.}

\textbf{7.10 sepfootnotes}

\texttt{fnpct} supports the sepfootnotes package \cite{dLim13}. Each note type you have created with one of the commands

\begin{verbatim}
\newfootnotes{⟨prefix⟩},
\newendnotes{⟨prefix⟩} or
\newsymbolfootnotes{⟨prefix⟩}
\end{verbatim}

gets the additional optional * to prevent punctuation switching. Also the corresponding mult-variant \texttt{⟨prefix⟩multnote} is defined. The option \texttt{multiple} again turns all note commands into their mult-variant.

You have to use the \texttt{newfootnotes} commands in the document preamble after loading \texttt{fnpct}.
7 Other packages

\begin{minipage}{.4\linewidth}
\begin{enumerate}
\item not to be confused with hay
\item or lumber according to some sources
\item probably fired clay bricks
\end{enumerate}
\end{minipage}

The three little pigs built their houses out of straw,\(^1\) sticks\(^2\) and bricks.\(^3\)

1. not to be confused with hay
2. or lumber according to some sources
3. probably fired clay bricks

7.11 sidenotes

The package sidenotes [TS12] is supported and its commands \texttt{\textbackslash sidenote} and \texttt{\textbackslash sidenotemark} are treated the same way as footnotes: they got an optional * argument and the additional \texttt{\textbackslash multisidenote} is created. The option \texttt{multiple} turns all note commands into their multi-variant.

7.12 snotez

The package snotez [Nie13b] is supported and its commands \texttt{\textbackslash sidenote} and \texttt{\textbackslash sidenotemark} are treated the same way as footnotes: they got an optional * argument and the additional \texttt{\textbackslash multisidenote} is created. The option \texttt{multiple} turns all note commands into their multi-variant.

7.13 tablefootnote

The package tablefootnote [Mün14] is supported and its \texttt{\textbackslash tablefootnote} command is treated the same way as all other note commands: it got an optional * argument and an additional \texttt{\textbackslash multtablefootnote} is defined. The option \texttt{multiple} turns all note commands into their multi-variant.

7.14 yafoot

Currently no issues are known when using \texttt{FNPC} with one or all of the packages of the yafoot [Nak99] bundle. Just for reference: these packages are pfnote, fnpos and dblfnote.
8 Adapting note commands

If a package is not natively supported you can try and adapt commands yourself. You’ll need to use one of the following commands. Please be aware that if the adapted command does not match the required syntax it will get the required syntax afterwards. This can result in dummy arguments or an overwritten * argument.

\AdaptNote{\cs}{\multcs}
This lets \cs adapt to the kerning behaviour and adds an optional * . It also creates a corresponding mult-variant. The package option multiple will now turn \cs into its mult-variant. Required syntax: \cs[⟨oarg⟩]{⟨marg⟩}

\AdaptNoteNoMult{\cs}
Like \AdaptNote but doesn’t create a mult-variant and thus there is no change in behaviour when the option multiple is used. Required syntax: \cs[⟨oarg⟩]{⟨marg⟩}

\AdaptNoteOpt{\cs}{\multcs}
This lets \cs adapt to the kerning behaviour and adds an optional * . It also creates a corresponding mult-variant. The package option multiple will now turn \cs into its mult-variant. Required syntax: \cs[⟨oarg⟩]{⟨oarg⟩}{⟨marg⟩}

\AdaptNoteOptNoMult{\cs}
Like \AdaptNoteOpt but doesn’t create a mult-variant and thus there is no change in behaviour when the option multiple is used. Required syntax: \cs[⟨oarg⟩]{⟨oarg⟩}{⟨marg⟩}

\AdaptNoteNoOpt{\cs}{\multcs}
Like \AdaptNote but requires \cs not to have an optional argument. If it had one it wouldn’t have it any more after the adaption. The package option multiple will now turn \cs into its mult-variant. Required syntax: \cs{⟨marg⟩}

\AdaptNoteNoOptNoMult{\cs}
Like \AdaptNoteNoOpt but doesn’t create a mult-variant. Required syntax: \cs{marg}

\AdaptNoteMark{\cs}
This lets \cs adapt to the kerning behaviour and adds an optional *. Required syntax: \cs[⟨oarg⟩]

\strict = true|false
Default: false
When true \AdaptNote (and the others) will issue errors if the note command in question has already been adapted.

8.1 tufte-latex’s side notes

For example using the \sidenote command from the tufte-handout class is easily possible, see also figure 9:
8 Adapting note commands

Some text in the document body. 1, 2

A second sidenote.

Some text in the document body. 1, 2

Some text in a sidenote.

A second sidenote.

F i.nine.taboldstyle: Adapt tu/f_te-latex.

\documentclass{tufte-handout}
\usepackage[multiple]{fnpct}
\AdaptNote\sidenote\multsidenote
\begin{document}
Some text in the document body\sidenote{Some
text in a sidenote.}; A second sidenote.\).
\end{document}

8.2 Adapting \footcite and siblings

If you’re willing to sacrifice \footcite’s * argument (which it has in some styles) you can adapt the commands provided by biblatex [Leh13] as well:

\begin{minipage}{.5\linewidth}
\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}. The companion has nothing on this topic\multfootcite{[see]
\[but there’s nothing there]}companion;\[or see][but there’s also nothing]}knuth:ct:a}.
\end{minipage}

The three little pigs built their houses out of straw, 1 sticks 2 and bricks. 3 The companion has nothing on this topic. 4, 5

1. not to be confused with hay
2. or lumber according to some sources
3. probably fired clay bricks
4. see GMS94, but there’s nothing there.
5. or see Knu84, but there’s also nothing.

The option multiple turns all \footcites into \multfootcites now. Remember that the
optional arguments then are inside the braces!

\begin{minipage}{.5\linewidth}
\noindent The three little pigs built their houses out of straw\footnote{not to be confused with hay}, \footnote{sticks\footnote{or lumber according to some sources}} and bricks\footnote{probably fired clay bricks}. The companion has nothing on this topic\footcite{see\[but\]there's nothing there\}companion;\[or see\[but there's also\]nothing}knuth:ct:a).
\end{minipage}

The three little pigs built their houses out of straw,\footnote{not to be confused with hay} sticks\footnote{or lumber according to some sources} and bricks\footnote{probably fired clay bricks}. The companion has nothing on this topic\footcite{see\[but\]there's nothing there\}companion;\[or see\[but there's also\]nothing}knuth:ct:a).

\begin{itemize}
\item[1.] not to be confused with hay
\item[2.] or lumber according to some sources
\item[3.] probably fired clay bricks
\item[4.] see GMS\footnote{but there's nothing there.}
\item[5.] or see Knu\footnote{but there's also nothing.}
\end{itemize}
