sample.
\printnoidxglossaries follows: ??

Glossary

sample an example 1

Too late to define an entry with the \docdef=\texttt{restricted} setting. (Definitions must come before \printglossary.)

New entry just defined: sample2. This will cause an error (or warning with \texttt{undefaction=warn}) in \printnoidxglossaries. This missing entry will cause a missing entry marker ?? at the start of the glossary (before the header).
