1 Introduction

The typesetting of a poem should be really be dependent on the particular poem. Individual problems do not usually admit of a general solution, so this document and code should be used more as a guide towards some solutions rather than providing a ready made solution for any particular piece of verse.

This manual is typeset according to the conventions of the \textsc{L\TeX\ }\texttt{docstrip} utility which enables the automatic extraction of the \textsc{L\TeX\ }macro source files \cite{GMS94}.

Section 3 describes the usage of the \texttt{verse} package and commented source code is in Section 4. Colour is used to indicate input and output material; a blue background indicates \textsc{L\TeX\ }input source, and a green background shows the corresponding output one should expect.

The doggerel used as illustrative material has been taken from \cite{Wil01}.

2 Verses in \textsc{L\TeX\ }\textit{without} this package

\LaTeX\ provides the \texttt{verse} environment which is defined as a particular kind of list. Within the environment you use ```\` to end a line and a blank line will end a stanza. For example, here is a single stanza poem:

```latex
\newcommand{\garden}{
  \hspace{1cm}
  I used to love my garden \`
  But now my love is dead \`
  For I found a bachelor's button \`
  In black-eyed Susan's bed.
}
```

When this is typeset as a normal \LaTeX\ paragraph (with no paragraph indentation) it looks like:

I used to love my garden
But now my love is dead
For I found a bachelor's button
In black-eyed Susan's bed.

Typesetting it within \textsc{L\TeX\ }'s \texttt{verse} environment produces:
I used to love my garden  
But now my love is dead  
For I found a bachelor’s button  
In black-eyed Susan’s bed.

The stanza could also be typeset within the \texttt{alltt} environment, defined in the standard \texttt{alltt} package, using a normal font and no \texttt{\linebreak} line endings.

\begin{alltt}\normalfont  
I used to love my garden  
But now my love is dead  
For I found a bachelor’s button  
In black-eyed Susan’s bed.  
\end{alltt}

which produces:

\begin{alltt}\normalfont  
I used to love my garden  
But now my love is dead  
For I found a bachelor’s button  
In black-eyed Susan’s bed.  
\end{alltt}

The \texttt{alltt} environment is like the \texttt{verbatim} environment except that you can use LaTeX macros inside it.

In the \texttt{verse} environment long lines will be wrapped and indented but in the \texttt{alltt} environment there is no indentation.

Some stanzas have certain lines indented, often alternate ones. To typeset stanzas like this you have to add your own spacing. For instance:

\begin{verse}  
There was an old party of Lyme  \texttt{\linebreak}  
Who married three wives at one time.  \texttt{\linebreak}  
\texttt{\hspace{2em}} When asked: ‘Why the third?’  \texttt{\linebreak}  
\texttt{\hspace{2em}} He replied: ‘One’s absurd,  \texttt{\linebreak}  
And bigamy, sir, is a crime.’  
\end{verse}

will be typeset in a verse environment as:

\begin{verbatim}  
There was an old party of Lyme  
Who married three wives at one time.  
     When asked: ‘Why the third?’  
     He replied: ‘One’s absurd,  
And bigamy, sir, is a crime.’  
\end{verbatim}

Using the \texttt{alltt} environment you can put in the spacing via ordinary spaces. That is, this

\begin{verbatim}  
There was an old party of Lyme  
\end{verbatim}
Who married three wives at one time.
    When asked: ‘Why the third?’
    He replied: ‘One’s absurd,
And bigamy, sir, is a crime.’
\end{alltt}

is typeset as

There was an old party of Lyme
Who married three wives at one time.
    When asked: ‘Why the third?’
    He replied: ‘One’s absurd,
And bigamy, sir, is a crime.’

More exotically you could use the TeX $\texttt{parshape}$ command:

\texttt{$\text{parshape} = 5 \text{ Opt} \ \\text{linewith} \ 0 \text{pt} \ \\text{linewith}$}
\texttt{2 \text{em} \ \\text{linewith} \ 2 \text{em} \ \\text{linewith} \ 0 \text{pt} \ \\text{linewith}$}
\texttt{$\text{noindent}$ There was an old party of Lyme \}
\texttt{Who married three wives at one time. \}
\texttt{When asked: ‘Why the third?’ \}
\texttt{He replied: ‘One’s absurd, \}
\texttt{And bigamy, sir, is a crime.’ \par}

which will be typeset as:

There was an old party of Lyme
Who married three wives at one time.
    When asked: ‘Why the third?’
    He replied: ‘One’s absurd,
And bigamy, sir, is a crime.’

All of this is about as much assistance as standard (La)TeX provides.
3 The verse package

The code provided by the verse package is meant to help with some aspects of typesetting poetry but does not, and cannot, provide a comprehensive solution to all the requirements that will arise.

A brief introduction is included to get started quickly; see the examples in Section 3.4 for more context.

3.1 Brief introduction

The verse package provides the verse environment for typesetting verses, overwriting L\TeX’s original definition. Every line in a verse environment must end with \, and every stanza within a verse should end with \! (an empty line afterwards is optional for readability). These requirements allow line numbering to work correctly in all cases. Use the \poemlines{⟨N⟩} command to number every ⟨N⟩th line of a poem.

Use the \poemtitle{⟨title⟩} command (just before the verse environment) to give each poem a title; commands are provided to adjust the formatting and include the poem into the standard table of contents.

Each stanza within a verse may optionally be surrounded by either an altverse or patverse environment to effect specific typesetting; altverse indents every second line of a stanza, and patverse allows arbitrary indentation based on the ⟨pattern⟩ given by \indentpattern{⟨pattern⟩}. The command \flagverse, placed at the very beginning of a stanza places a ‘title’; e.g., for numbering and otherwise labelling stanzas.

3.2 Comprehensive documentation

3.2.1 Main verse environments

The verse environment provided by the package is an extension of the usual LaTeX environment. The environment takes one optional parameter, which is a length; for example \begin{verse}[4em]. You may have noticed that the earlier verse examples are all near the left margin, whereas verses usually look better if they are typeset about the center of the page. The length parameter, if given, should be about the length of an average line, and then the entire contents will be typeset with the mid point of the length centered horizontally on the page.

The length \versewidth is provided as a convenience. It may be used, for example, to calculate the length of a line of text for use as the optional argument to the verse environment:

\settowidth{\versewidth}{This is the average line,}
\begin{verse}[\versewidth]
\end{verse}

Within the verse environment verses are separated by a blank line in the input. Individual verses within verse may, however, be enclosed in the altverse environment. This has the effect of indenting the 2nd, 4th, etc., lines of the verse by the length \vgap.
Individual verses within the `verse` environment may be enclosed in the `patverse` environment. Within the environment the indentation of each line is specified by an indentation pattern, which consists of an array of digits, \(d_1\) to \(d_n\), and the \(n^{th}\) line is indented by \(d_n\) times `\vgap`. However, the first line is not indented, irrespective of the value of \(d_1\).

The `patverse*` environment is similar to the `patverse` environment, except that the pattern will keep on repeating itself. The indentation pattern for a `patverse` environment is specified via the \texttt{\indentpattern\{\langle digits \rangle\}} command. If the pattern is shorter than the number of lines in a verse, the trailing lines will not be indented.

### 3.2.2 Other verse commands

\texttt{\\\\\\\\\} Within the `verse` environment, the macro `\\\` must be used at the end of each line of a verse, except for the last line in each stanza. If the lines in a poem are to be numbered then `\\\` must be used at the end of the last line in each stanza (the `\\` macro increments the line numbers).

\texttt{\\\*} The starred version, `\\\*`, prohibits a page break after the line. The `\\>` version `\\\>` causes a linebreak within a verse line.

The `\\\` macro in its various forms can also take an optional length argument, like `\\\[30pt]` which will insert `30pt` of vertical space; in the case of `\\>[30pt]` an additional `30pt` of horizontal space will be inserted after the linebreak (effectively `\\>` is shorthand for `\verselinebreak`).

The allowable forms of the macro are:

\texttt{\\\, \\\*, \\\!, \\\>, \\[\ldots\], \\*[\ldots], \!/\ldots, and \\![\ldots].}

\texttt{\vin} The command `\vin` is shorthand for `\hspace{\vgap}` for use at the start of an indented line of verse. The length `\vgap` (initially `1.5em`) can be changed by `\setlength` or `\addtolength`.

\texttt{\vindent} When a verse line is too long to fit within the typeblock it is wrapped onto the next line with a space, given by the value of the length `\vindent`.

\texttt{\verselinebreak} Using the command `\verselinebreak\{\langle length \rangle\}` will cause later text in the line of the verse to be typeset indented on the following line. If the optional length argument is not given the indentation is `\vgap`, otherwise the indentation is given by `\langle length \rangle` plus `\vgap`. The broken line will count as a single line as far as the `altverse` and `patverse` environments are concerned (see also the `\\>` macro).

\texttt{\flagverse} Putting the command `\flagverse\{\langle flag \rangle\}` at the start of a line of verse will typeset `\langle flag \rangle` towards the left margin, ending a distance `\vleftskip` before the verse line.

### 3.2.3 Generic verse formatting

\texttt{\stanzaskip} The length `\stanzaskip` controls the spacing between stanzas. It may be changed like any other length.

\texttt{\leftmargini} All verse lines have a minimum indent given by the length `\leftmargini` which
also applies to any list environment. To change the minimum indent for verses do something along the lines:

\begin{verbatim}
\newlength{\saveleftmargini}
\setlength{\saveleftmargini}{\leftmargini}
\setlength{\leftmargini}{-1em}% for example to outdent verse
% verses
\setlength{\leftmargini}{\saveleftmargini}% restore original value
\end{verbatim}

### 3.2.4 Line numbering

The declaration \texttt{\poemlines{\textit{nth}}} will cause every \textit{nth} lines of succeeding verses to be numbered. For example, \texttt{\poemlines{5}} will number every fifth line. The default is \texttt{\poemlines{0}} which prevents any numbering.

The command \texttt{\setverselinenums{\textit{firstlinenum}}{\textit{startnumsat}}} can be used to set the number of the first verse line to \textit{firstlinenum} instead of the default ‘1’ and to specify that the first printed line number should be for line number \textit{startnumsat}. If used the command must be given within the \texttt{verse} environment before the first line of the verses. For example, if you were quoting portions of poems from a source where the lines were numbered, your first line might be the 112th of the original and that line was originally numbered:

\begin{verbatim}
\setverselinenums{112}{112}
\end{verbatim}

or if it was line 115 that was first numbered:

\begin{verbatim}
\setverselinenums{112}{115}
\end{verbatim}

Note that the numbers must be such that the following relationship holds:

\texttt{firstlinenum <= startnumsat < firstlinenum + poemlines}

Lines are numbered via \texttt{\thepoemline} which defaults to typesetting arabic numerals via:

\begin{verbatim}
\renewcommand*{\thepoemline}{\arabic{poemline}}
\end{verbatim}

The particular font is defined by \texttt{\verselinenumfont{\textit{font-spec}}}, with default:

\begin{verbatim}
\verselinenumfont{\rmfamily}
\end{verbatim}

By default the numbers are typeset at the distance \texttt{\vrightskip} into the right margin. If you want line numbers set at the left use the \texttt{\verselinenumbersleft} declaration. To revert to the default use \texttt{\verselinenumbersright}.

The standard \texttt{\label{\textit{metakey}}} command can be used inside the \texttt{verse} environment, between the end of the text of a line and the line-ending \texttt{\textbackslash}, to grab that line number, no matter what the setting of \texttt{\poemlines}. Elsewhere the standard \texttt{\ref{\textit{(key)}}} command can be used to refer to the line number.

### 3.2.5 Titles

\texttt{\poemtitle{\textit{short}}{\textit{long}}} typesets the title of a poem and makes an entry into the ToC. There is a starred version that makes no ToC entry.

The kind of entry made in the ToC by the \texttt{\poemtitle} command is defined by \texttt{\poemtoc}. The initial definition is:

\begin{verbatim}
\newcommand{\poemtoc}{section}
\end{verbatim}
The verse package for a section-like ToC entry. This can be changed to, say, chapter or subsection or ....

\poemtitlefont
This macro specifies the font and positioning of the poem title. Its initial definition is:
\newcommand{\poemtitlefont}{\normalfont\bfseries\large\centering}
to give a \large bold centered title. This can of course be renewed if you want something else.

\beforepoemtitleskip\afterpoemtitleskip
These two lengths are the vertical space before and after the \poemtitle title text. They are initially defined to give the same spacing as for a \section title. They can be changed by \setlength or \addtolength for different spacings.

\poemtitlemark
The \poemtitle macro, but not \poemtitle*, calls the \poemtitlemark{⟨title⟩} macro, which is defined to do nothing. This would probably be changed by a pagestyle definition (like \sectionmark or \chaptermark).

3.3 Supports
The package includes some macros for supporting the patverse environment which may be more generally useful. See the code section for examples on how these may be used.

\newarray
\newarray{⟨arrayname⟩}{⟨low⟩}{⟨high⟩} defines the ⟨arrayname⟩ array, where ⟨arrayname⟩ is a name like MyArray. The lowest and highest array indices are set to ⟨low⟩ and ⟨high⟩ respectively, where both are integer numbers.

\setarrayelement
\setarrayelement{⟨arrayname⟩}{⟨index⟩}{⟨text⟩} sets the ⟨index⟩ location in the ⟨arrayname⟩ array to be ⟨text⟩. For example:
\setarrayelement{MyArray}{23}{$2^{23}$}.

\getarrayelement
\getarrayelement{⟨arrayname⟩}{⟨index⟩}{⟨result⟩} sets the parameterless macro ⟨result⟩ to the contents of the ⟨index⟩ location in the ⟨arrayname⟩ array. For example:
\getarrayelement{MyArray}{23}{\result}.

\checkarrayindex
\checkarrayindex{⟨arrayname⟩}{⟨index⟩} checks if ⟨arrayname⟩ is an array and if ⟨index⟩ is a valid index for the array.

\stringtoarray
\stringtoarray{⟨arrayname⟩}{⟨string⟩} puts each character from ⟨string⟩ sequentially into the ⟨arrayname⟩ array, starting at index 1. For example:
\stringtoarray{MyArray}{Chars}.

\arraytostring
The macro \arraytostring{⟨arrayname⟩}{⟨result⟩} assumes that ⟨arrayname⟩ is an array of characters, and defines the macro ⟨result⟩ to be that sequence of characters. For example:
\arraytostring{MyArray}{\MyString}.

\checkifinteger
\checkifinteger{⟨num⟩} checks if ⟨num⟩ is an integer (not less than zero). If it is then \ifinteger is set TRUE, otherwise it is set FALSE.

3.4 Examples
Here are some sample verses using the package facilities. First our old Limerick friend, but titled and centered:
3.4 Examples

\renewcommand{\poemtoc}{subsection}
\poemtitle{A Limerick}
\settowidth{\versewidth}{There was an old party of Lyme}
\begin{verse}[\versewidth]
There was an old party of Lyme
Who married three wives at one time.
\vspace{-1cm}
When asked: 'Why the third?'
\vspace{-1cm}
He replied: 'One's absurd,
And bigamy, sir, is a crime.'
\end{verse}

which gets typeset as below. The default \poemtoc is redefined to subsection so the title is entered into the ToC as an unnumbered subsection.

A Limerick

There was an old party of Lyme
Who married three wives at one time.
When asked: 'Why the third?'
He replied: 'One's absurd,
And bigamy, sir, is a crime.'

Next is the Garden verse within the altverse environment. It is titled and centered.

\settowidth{\versewidth}{But now my love is dead}
\poemtitle{Love's lost}
\begin{verse}[\versewidth]
\begin{altverse}
garden
\end{altverse}
garden
\end{altverse}
\end{verse}

which produces:

Love’s lost

I used to love my garden
But now my love is dead
For I found a bachelor’s button
In black-eyed Susan’s bed.

It is left up to you how you might want to add information about the author of a poem. Here is one example of a macro for this:

\newcommand{\attrib}[1]{%}
\nopagebreak{\raggedleft\footnotesize #1\par}
This can be used as in the next bit of doggerel.

\poemtitle{Fleas}
\settowidth{\versewidth}{What a funny thing is a flea}
\begin{verse}[\versewidth]
What a funny thing is a flea. \\ 
You can’t tell a he from a she. \\ 
But he can. And she can. \\ 
Whoopee! \\ 
\end{verse}
\attrib{Anonymous}

Fleas

What a funny thing is a flea.
You can’t tell a he from a she.
But he can. And she can.
Whoopee!

Anonymous

Here is an example of line wrapping.

\poemtitle{In the beginning}
\settowidth{\versewidth}{And objects at rest tended to remain at rest}
\begin{verse}[\versewidth]
Then God created Newton, \\ 
And objects at rest tended to remain at rest, \\ 
And objects in motion tended to remain in motion, \\ 
And energy was conserved
  and momentum was conserved
  and matter was conserved \\ 
And God saw that it was conservative. \\ 
\end{verse}
\attrib{Possibly from \textit{Analog}, circa 1950}

In the beginning

Then God created Newton,
And objects at rest tended to remain at rest,
And objects in motion tended to remain in motion,
And energy was conserved and momentum was conserved and
  matter was conserved
And God saw that it was conservative.

Possibly from \textit{Analog}, circa 1950
Here is one with a forced line break and a slightly different title style.

\renewcommand{\poemtitlefont}{\normalfont\large\itshape\centering}
\poemtitle{Mathematics}
\settowidth{\versewidth}{Than Tycho Brahe, or Erra Pater:}
\begin{verse}
In mathematics he was greater \"
Than Tycho Brahe, or Erra Pater: \"
For he, by geometric scale, \"
Could take the size of pots of ale;\"
Resolve, by sines \">
If bread or butter wanted weight; \"
And wisely tell what hour o’ the day \"
The clock does strike, by Algebra. \"
\end{verse}
\attrib{Samuel Butler (1612--1680)}

---

**Mathematics**

In mathematics he was greater
Than Tycho Brahe, or Erra Pater:
For he, by geometric scale,
Could take the size of pots of ale;
Resolve, by sines
and tangents straight,
If bread or butter wanted weight;
And wisely tell what hour o’ the day
The clock does strike, by Algebra.

Samuel Butler (1612–1680)

---

Another limerick, but this time taking advantage of the \texttt{patverse} environment and numbering every third line.

\settowidth{\versewidth}{There was a young lady of Ryde}
\poemtitle{The Young Lady of Ryde}
\begin{verse}
\poemlines{3}
\indentpattern{00110}
\begin{patverse}
There was a young lady of Ryde \"
Who ate some apples and died. \"
The apples fermented \"
Inside the lamented \"
And made cider inside her inside. \"
\end{patverse}
\poemlines{0}
\end{verse}
The Young Lady of Ryde

There was a young lady of Ryde
Who ate some apples and died.
  The apples fermented
  Inside the lamented
  And made cider inside her inside.

The next example is a song you may have heard of. The ‘forty-niner’ in line 3 refers to the gold rush of 1849.

\setwidth{\versewidth}{In a cavern, in a canyon,}
\poemtitle{Clementine}
\begin{verse}
\begin{altverse}
\flagverse{1.} In a cavern, in a canyon, \\
Excavating for a mine, \\
Lived a miner, forty-niner, \label{vs:49} \\
And his daughter, Clementine. \!
\end{altverse}
\begin{altverse}
\flagverse{\textsc{chorus}} Oh my darling, Oh my darling, \\
Oh my darling Clementine. \!
Thou art lost and gone forever, \\
Oh my darling Clementine \!
\end{altverse}
\end{verse}

Clementine

1. In a cavern, in a canyon, 
   Excavating for a mine, 
   Lived a miner, forty-niner, 
   And his daughter, Clementine. 

CHORUS 
   Oh my darling, Oh my darling, 
   Oh my darling Clementine. 
   Thou art lost and gone forever, 
   Oh my darling Clementine

The last example is a much more ambitious use of \indentpattern. In this case it is defined as:
\indentpattern{013555432211234689877977554565322234554445668878899}
and the result is shown on the next page.
Mouse’s Tale

Fury said to a mouse, That he met in the house, ‘Let us both go to law: I will prosecute you. — Come, I’ll take no denial; We must have a trial: For really this morning I’ve nothing to do.’ Said the mouse to the cur, Such a trial, dear sir, With no jury or judge, would be wasting our breath.’ ‘I’ll be judge, I’ll be jury,’ said cunning old Fury; ‘I’ll try the whole cause and condemn you to death.’

Lewis Carrol, Alice’s Adventures in Wonderland, 1865
4 The package code

To try and avoid name clashes, all the internal commands include the string @vs.

4.1 Preliminaries

Announce the name and version of the package, which requires \LaTeX{} 2ε.

\needsinfo{LaTeX2e}
\ProvidesPackage{verse}[2009/09/04 v2.4a verse typesetting]

For reference, here is the original definition of the verse environment from classes.dtx, based on \let \equal \@centercr.

\newenvironment{verse}
  \{\let\\@centercr \itemsep \z@ \itemindent -1.5em \listparindent\itemindent \rightmargin \leftmargin \advance\leftmargin 1.5em\}
  \item\relax
  \{\endlist

4.2 Verse code

\newcounter{vslineno}
\newcounter{poemline}
\newcounter{fvsline}
\setcounter{fvsline}{0}
\newcounter{modulo@vs}
\newcounter{verse@envctr}
\setcounter{verse@envctr}{0}
\newcommand*{\theHpoemlines}{\arabic{verse@envctr}.\arabic{poemline}}
\poemlines{⟨nth⟩} specifies that every ⟨nth⟩ poem line should be numbered. Default is not to number any lines.
\newcommand{\poemlines}[1]{% \ifnum#1>\z@ \setcounter{modulo@vs}{#1}% \else \setcounter{modulo@vs}{0}% \fi %} \poemlines{0}
4.2 Verse code

\verselinenumfont Set the font for line numbers.
\vlvnumfont

19 \newcommand*{\verselinenumfont}{\def\vlnumfont{#1}}
• \verselinenumfont{\rmfamily}

\setverselinenums \setverselinenums{\langle firstlinenum \rangle}{\langle startnumsat \rangle} sets the number of the first verse line to be \langle firstlinenum \rangle and the first line to be numbered to be \langle startnumsat \rangle. Note that \texttt{startnumsat < (firstlinenum + poemlines)}.

21 \newcommand*{\setverselinenums}{[2]%
Set the poemline counter to #1.
22 \setcounter{poemline}{#1}\addtocounter{poemline}{\m@ne}
23 \refstepcounter{poemline}
24 \ifnum\c@modulo@vs>\z@
If line numbers are to be printed, set \c@fvsline to a suitable value so that the first number to be printed will be line #2.
25 \@tempcnta #2\relax
26 \divide\@tempcnta\c@modulo@vs
27 \multiply\@tempcnta\c@modulo@vs
28 \c@fvsline #2\relax
29 \advance\c@fvsline-\@tempcnta
30 \if
31 \}

\getmodulo@vs This returns either nothing or a poem line number for printing.
32 \newcommand{\getmodulo@vs}{\bgroup
33 \ifnum\c@modulo@vs<\@ne % no line numbers
34 \else
35 \ifnum\c@modulo@vs<\tw@ % every line numbered
36 \vlnumfont\thepoemline
37 \else
38 \@tempcnta\c@poemline
39 \advance\@tempcnta-\c@fvsline
40 \divide\@tempcnta\c@modulo@vs
41 \multiply\@tempcnta\c@modulo@vs
42 \advance\@tempcnta\c@fvsline
43 \ifnum\@tempcnta<\c@poemline\vlnumfont\thepoemline\fi
44 \fi
45 \fi
46 \egroup}

\ifaltindent This should be set TRUE for indenting alternate lines.
47 \newif\ifaltindent

\ifpattern This should be set TRUE for indenting lines according to a pattern.
48 \newif\ifpattern

\ifstarpattern This should be set TRUE for indenting lines according in a \texttt{patverse*} environment.
49 \newif\ifstarpattern
\texttt{\versewidth} \texttt{\versewidth} is a convenience length for the user.

\texttt{\newlength{\versewidth}}

\texttt{\vgap} The length \texttt{\vgap} is used as the basis for spacing. \texttt{\vin} makes a horizontal space of \texttt{\vgap} and \texttt{\vindent} is the indentation of wrapped lines in a verse. \texttt{\stanzaskip} controls the space between stanzas.

\texttt{\newlength{\vgap}}
\texttt{\setlength{\vgap}{1.5em}}
\texttt{\newcommand{\vin}{\hspace*{\vgap}}}
\texttt{\newlength{\vindent}}
\texttt{\setlength{\vindent}{2\vgap}}
\texttt{\newlength{\stanzaskip}}
\texttt{\setlength{\stanzaskip}{0.75\baselineskip}}

\texttt{\vleftskip} Skips to the left and right of a line of verse.
\texttt{\vrightskip}

\texttt{\newlength{\vleftskip}}
\texttt{\setlength{\vleftskip}{30pt}}
\texttt{\newlength{\vrightskip}}
\texttt{\setlength{\vrightskip}{10pt}}

\texttt{\flagverse} \texttt{\flagverse{\langle flag \rangle}} inserts \langle flag \rangle at the left (of a line).

\texttt{\newcommand{\flagverse}[1]{\hskip-\vleftskip\llap{#1}\hskip\vleftskip}}
\texttt{\ignorepaces}
\texttt{\verselinebreak Break a verse line by inserting \texttt{\newline}}
\texttt{\newcommand{\verselinebreak}{\hspace*{#1} \newline \ignorespaces}}
\texttt{\incr@vsline Increment the line counters.}
\texttt{\newcommand{\incr@vsline}{\refstepcounter{poemline}\stepcounter{vslineno}}} \texttt{\@vsifbang Like the kernel \texttt{\@ifstar} except it looks for an exclamation mark!}
\texttt{\newcommand{\@vsifbang}[1]{\@firstoftwo{#1}}} \texttt{\@vsifgt Like the kernel \texttt{\@ifstar} except it looks for a > character.}
\texttt{\newcommand{\@vsifgt}[1]{\@ifnextchar >{\@firstoftwo{#1}}}}

\textsuperscript{1}In an email to me dated 2006/01/13 Aaron Rendahl pointed out that this should include an \texttt{\ignorepaces}.\vleftskip\vrightskip
These control the typesetting of verse line numbers to the right and to the left of the verse. Default is to set them at the right.

\verselinenumbersright\verselinenumbersleft

\@vscentercr

This puts the poem line number in the margin, increments the line numbers, and then deals with the options. It is based on the kernel \@centercr. This has to handle various forms of the \\ command: \, \*, \!, and \>, together with an optional length argument.

\verselinebreak

For \> call \verselinebreak to process it.

\start@vsline

This is called at the start of every verse line except the first.
**verse** The extended *verse* environment. It sets the verse line counter, then defines the particular list environment adjusting the margins to center according to the length parameter. If the length parameter is at least the \texttt{\linewidth} then the `centering` defaults to the original *verse* layout.

\begin{verbatim}
\renewenvironment{verse}{% 
\stepcounter{verse@envctr}% 
\setcounter{poemline}{0}\refstepcounter{poemline}% 
\setcounter{vslineno}{1}% 
\let\=\@vscentercr
\list{}{\itemsep \z@ 
\itemindent -\vindent% 
\parsep \stanzaskip
\ifdim #1 < \linewidth 
\rightmargin \z@
\setlength{\leftmargin}{\linewidth}%
\addtolength{\leftmargin}{-#1}%
\addtolength{\leftmargin}{-0.5\leftmargin}%
\else
\rightmargin \leftmargin
\fi
\addtolength{\leftmargin}{\vindent}}% 
\item[]}
\endlist
\end{verbatim}

**altverse** This sets \texttt{\altindenttrue} (afterwards false) and initialises the line counter.

\begin{verbatim}
\newenvironment{altverse}{\starpatternfalse\patternfalse\altindenttrue\setcounter{vslineno}{1}}{}\altindentfalse
\end{verbatim}

### 4.3 Pattern code

The pattern code is based on the idea of converting a string of digits to an array of digits, and then being able to access the digit at a particular position in the array.

\texttt{\vs@nameedef} A shorthand for using \texttt{\protected@edef}.

\begin{verbatim}
\newcommand{\vs@nameedef}[1]{% 
\expandafter\protected@edef\csname #1\endcsname
\end{verbatim}

\texttt{\ifbounderror} A flag set TRUE if an attempt is made to access an array element outside the array limits.

\begin{verbatim}
\newif\ifbounderror
\end{verbatim}

\texttt{\ifinteger} A flag to indicate if a `number` is an integer (TRUE) or not (FALSE).

\begin{verbatim}
\newif\ifinteger
\end{verbatim}
4.3 Pattern code

A counter for the number of characters.
\newcounter{chrsinstr} \% CHARactersINSTRing

\newarray\newarray{(arrayname)}{(low)}{(high)} defines an array called \textit{(arrayname)} (no backslash e.g. MyArray), with low and high limits \textit{(low)} and \textit{(high)}.

\newcommand{\newarray}{3}{% \vs@nameedef{#1-low}{#2} \vs@nameedef{#1-high}{#3} \ifnum #3<#2 \PackageError{verse}{Limits for array #1 are in reverse order}{@ehc}% \fi %}

\stringtoarray\stringtoarray{(arrayname)}{(string)} puts each character from \textit{(string)} sequentially into the \textit{(arrayname)} array, starting with \textit{(low)} = 1. It checks for an empty \textit{(string)} and handles that specially.

\newcommand{\stringtoarray}{2}{% \def\@vsarrayname{#1} \protected@edef\the@vsstring{#2} \newarray{\@vsarrayname}{1}{1} \@ifmtarg{#2}{% \c@chrsinstr \z@ \@namedef{\@vsarrayname-1}{}% }{% \c@chrsinstr \@ne \expandafter\@vsstringtoarray \the@vsstring\@vsend \%\@vsinext\@vsend% }\@vsinext%}

\@vsstringtoarray Recursively adds characters to the array \texttt{@vsarrayname}, incrementing the array’s high limit.
\def\@vsstringtoarray \#1\#2\@vsend{% \@namedef{\@vsarrayname-the\c@chrsinstr}{\#1} \vs@nameedef{\@vsarrayname-high}{\the\c@chrsinstr} \ifmtarg{\#2}{% \def\@vsinext{}% }{% \advance\c@chrsinstr \@ne \def\@vsinext{% \@vsstringtoarray \#2\@vsend\%\@vsinext\@vsend\%\@vsinext\@vsend% }\@vsinext%}

\setarrayelement\setarrayelement{(arrayname)}{(index)}{(value)} sets the \textit{(arrayname)} array’s element at \textit{(index)} to \textit{(value)}.
\newcommand{\setarrayelement}{3}{% \checkarrayindex{\#1}{\#2}%}
\getarrayelement\getarrayelement{⟨arrayname⟩}{⟨index⟩}{⟨value⟩} defines the parameterless macro ⟨value⟩ (e.g., \result) to be the value at ⟨index⟩ in the ⟨arrayname⟩ array.

\checkarrayindex\checkarrayindex{⟨arrayname⟩}{⟨index⟩} checks that the ⟨index⟩ of the ⟨arrayname⟩ array is valid. \ifbounderror is set FALSE if everything is OK, otherwise it is set TRUE.

\arraytostring\arraytostring{⟨arrayname⟩}{⟨string⟩} converts the characters in the ⟨arrayname⟩ array into the parameterless macro ⟨string⟩ (e.g., \MyString).
4.3 Pattern code

\def#2{}\%\n\@c@chrsinstr = \@nameuse{#1-low}\%\n\@vsarraytostring{#1}{#2}\%

\@vsarraytostring \@vsarraytostring\((arrayname)\)\{(string)\} recursively adds the (character) elements from \((arrayname)\) to \((string)\).

\newcommand{\@vsarraytostring}[2]{\%\n\ifnum\c@chrsinstr>\@nameuse{#1-high}\else\protected@edef#2{#2\@nameuse{#1-\thechrsinstr}}\%\n\advance\c@chrsinstr\@ne\%\n\@vsarraytostring{#1}{#2}\%\n\fi\%\n}

\checkifinteger \checkifinteger\((num)\) checks if \((num)\) is an integer. If it is, then \texttt{\ifinteger} is set \texttt{TRUE}, otherwise it is set \texttt{FALSE}. (Code based on Donald Arseneau's cite package).

\newcommand{\checkifinteger}[1]{\%\n\protected@edef\@vsa{#1}\%\n\ifcat _\ifnum9<1\gobm{#1} _\else A\fi\\integertrue\else\\integerfalse\fi\%\n\fi\%\n}

\gobm \gobm\((num)\) is defined as \((num)\). It could be defined as:
\newcommand{\gobm}[1]{\ifx-#1\expandafter\gobm\else#1\fi}\% which would remove a leading minus sign (hyphen) from its argument (gobm = gobble minus sign). (Code from a posting to CTT by Donald Arseneau on 1997/07/21).

\newcommand{\gobm}[1]{#1}

\indentpattern \indentpattern\((digits)\) stores \((digits)\) for use as a verse indentation pattern.

\newcommand{\indentpattern}[1]{\%\n\stringtoarray{Array@vs}{#1}\%\n}

\get@vsindent \get@vsindent gets the indent pattern digit for the \texttt{\thevslineno}, then uses this to specify the line indentation as digit*\texttt{\vgap}.

\newcommand{\get@vsindent}{\%\n\getarrayelement{Array@vs}{\number\value{vslineno}}{\@vspat}\%\n\ifbounderror\arraytostring{Array@vs}{\@vsp@t}\%\n\PackageWarning{verse}{Index \\
\thevslineno for pattern \texttt{\@vsp@t} is out of bounds}\%\n\def\@vspat{0}\%
}
\else \checkifinteger{\@vspan} \fi \ifinteger \else \arraytostring{Array@vs}{\@vspan} \PackageWarning{verse}{'\@vspan' at index 'the vslineno' in pattern '\@vspan' is not a digit} \def\@vspan{0} \fi \fi \ifcase\@vspan \else \hspace*{\@vspan\vgap} \fi \getstar@vsindent \getstar@vsindent gets the indent pattern digit for the \texttt{patverse*} environment, then uses this to specify the line indentation as \texttt{digit*\vgap}. It lets the pattern repeat by resetting the \texttt{vslineno} counter.

\newcommand{\getstar@vsindent}{\expandafter\ifx\csname Array@vs-high\endcsname\relax \PackageError{verse}{A pattern has not been specified}{\@ehc} \else \ifnum\c@vslineno>\@nameuse{Array@vs-high}\setcounter{vslineno}{1}\fi \get@vsindent \fi \get@vsindent

\texttt{patverse} The environment for setting verse line indents according to a pattern. It starts by setting \texttt{\ifpattern} TRUE, any other flags to FALSE, and initialises the line number. It ends by setting \texttt{\ifpattern} FALSE.

\newenvironment{patverse}{\starpatternfalse\patterntrue\altindentfalse\setcounter{vslineno}{1}}{\patternfalse}

\texttt{patverse*} The environment for setting verse line indents according to a repeating pattern. It starts by setting \texttt{\ifstarpattern} TRUE, any other flags to FALSE, and initialises the line number. It ends by setting \texttt{\ifstarpattern} FALSE.

\newenvironment{patverse*}{\starpatterntrue\patternfalse\altindentfalse\setcounter{vslineno}{1}}{\starpatternfalse}

4.4 Title code

\poemtitle Typeset a poem title (like \texttt{section} or other). The actual work is done by \texttt{\@vspan} (plain) or \texttt{\@vspan} (starred).

\newcommand{\poemtitle}{\par \secdef\@vspan@title\@vspan@title*}
\poemtoc  The kind of entry \poemtitle is to make in the ToC.
265 \newcommand{\poemtoc}{section}

\@vsptitle  Typeset a \poemtitle.
266 \def\@vsptitle[#1]#2{%
267   \@nameuse{phantomsection}%
268   \addcontentsline{toc}{\poemtoc}{#1}%
269   \poemtitlemark{#1}%
270   \@vstypeptitle[#2]%
271   \@afterheading
272 }

\@vssptitle  Typeset a \poemtitle*.
273 \def\@vssptitle#1{%
274   \@vstypeptitle{#1}
275   \@afterheading
276 }

\@vstypeptitle  This really typesets the title.
277 \newcommand{\@vstypeptitle}[1]{%
278   \vspace{\beforepoemtitleskip}%
279   \poemtitlefont #1\par%
280   \vspace{\afterpoemtitleskip}%
281 }

\poemtitlefont  Sets the appearance to the title of a poem, and something for a header.
282 \newcommand{\poemtitlefont}{\normalfont\large\bfseries\centering}

\poemtitlemark  The end of this package.
283 \newcommand{\poemtitlemark}[1]{
284   \beforepoemtitleskip
285   \afterpoemtitleskip

\beforepoemtitleskip  Lengths before and after a poem title, using the \section values.
286 \newlength{\beforepoemtitleskip}
287 \setlength{\beforepoemtitleskip}{3.5ex \@plus 1ex \@minus .2ex}

\afterpoemtitleskip
288 \setlength{\afterpoemtitleskip}{2.3ex \@plus .2ex}
