NAME
  cefsconv – convert a TeX document in SJIS encoding containing CEF macros into ‘preprocessed’ form.

SYNOPSIS
  cefsconv < infile > outfile

DESCRIPTION
  The Chinese Encoding Framework (CEF) developed by Christian Wittern
  <cwittern@conline.central.de> makes it possible to include CJK characters in
  various encodings using the SGML macros &CX-aabb; for Big 5 and CNS encoding and &U-
  aabb; for Unicode (X denotes a number between 0 and 7; 0 represents Big 5 encoding, 1-7 CNS
  encoding planes 1-7. aabb is either a decimal or hexadecimal number).

  cefsconv converts the CEF macros of a SJIS encoded document together with the SJIS encoding
  itself into a form which can directly processed with LATEX. It is identical to

    sjisconv < infile | cefconv > outfile

  This filter is part of the CJK macro package for LATEX.
