The BearWear Package

Idea: Bär  Implementation: Ulrike Fischer† 2020-01-15

1 Basic Usage

The package is based on TikZ and the main command should be used in a `tikzpicture` or – as shown in some of the examples – with `\tikz`.

1.1 The shirts

The package provides a number of shirts for the bear, long sleeves and round neckline are the defaults:

```latex
\tikz\bearwear % default
[long sleeves, round neckline];
\tikz\bearwear [t-shirt];
\tikz\bearwear [muscle shirt];
\tikz\bearwear [v-neckline];
\tikz\bearwear [t-shirt,v-neckline];
\tikz\bearwear [muscle shirt,v-neckline];
```

†Issues should be reported at https://github.com/u-fischer/bearwear

*This file describes v0.1, last revised 2020-01-15.
1.2 Dressing the bear

To dress the bear with the shirt, simply add the `\bear` command from the `tikzlings-bears` package.

\begin{verbatim}
\tikz{\bear;\bearwear[v-neckline];}
\tikz{\bear;\bearwear[muscle shirt];}
\end{verbatim}

---

1.3 Coloring the shirts

The body and the arms of the shirts can be colored. They are three basic keys: `leftarm`, `rightarm` and `body`, and two meta keys: `arms` and `shirt`. Basically every option that would make sense in a `\fill` is allowed here. Patterns e.g. would work too.

\begin{verbatim}
\bear;
\bearwear [v-neckline,
   leftarm=red,
   rightarm=green,
   body=blue];
\end{verbatim}

\begin{verbatim}
\bear;
\bearwear [arms=green];
\end{verbatim}

\begin{verbatim}
\bear;
\bearwear [shirt=
   {shade,
     top color=blue,
     bottom color=red}];
\end{verbatim}
1.4 Additional patterns

As seen in the last example patterns can be added instead of colors, but sometimes it makes sense to add them on top to preserve a background color. For this the package provides special pattern keys:

\begin{itemize}
  \item leftarm pattern
  \item rightarm pattern
  \item arms pattern
  \item body pattern
  \item shirt pattern
\end{itemize}

1.5 Decorations

The \texttt{deco} keys add their value to a \texttt{path picture} key. This can be used to place emblems or use graphics as pattern. To help with the placement two coordinates are predefined: \texttt{bearheart} and \texttt{beartummy}.
\bear;
\bearwear[shirt deco =
{\node at (beartummy)
{\includegraphics[width=5cm]
{tartan3}};};]

\bear;
\bearwear[body deco=
{\node at ([yshift=-1mm]bearheart)
{\includegraphics[width=0.3cm]
{flag}};};]

\bear;
\bearwear[
shirt=Beige!80!black,
body deco=
{\node at ([yshift=-1mm]bearheart)
{\includegraphics[width=0.5cm]
{latex-project-logo}};};]

\bear;
\bearwear[
shirt=HotPink,
body deco=
{\path (bearheart)++(0,-3mm)
pic(hippo);};]

\bear;
\bearwear[
arms= DeepSkyBlue,
body deco =
{\node at ([yshift=-2mm]beartummy)
{\includegraphics[width=4cm]
{montblanc}};
\node[text=white,
font=\tiny\sffamily]
at ([yshift=1.95mm]beartummy)
{{Mont Blanc}};}
]
1.6 Scaling
Scaling works as expected, but don’t forget that nodes in TikZ normally don’t scale if you don’t use the `transform shape` key:

```
\begin{scope}[scale=1.5]
bear;
bearwear[
  arms= DeepSkyBlue,
  body deco =
  \{\node at ([yshift=-2mm] beartummy)
    \{\includegraphics[width=4cm]{montblanc};
    \node[text=white,
      font=\tiny\sffamily]
      at ([yshift=2mm] beartummy)
      \{\text{Mont Blanc}};\}
  ]
\end{scope}
```

1.7 Setting up defaults
With `\bearwearsetup` you can change the defaults:

```
\bearwearsetup
  \{body=green!50!black,arms=green\}
\tikz{\bear;\bearwear;}
\tikz{\bear;\bearwear;}
```

2 The brains behind BearWear

**Ulrike** Bär, your decision to create BearWear has come as a surprise to many. Did you expect this?

**Bär** Quite true, Ulrike. I am better known as an outdoor type and the fashionistas didn’t reckon with me at all.

**Ulrike** So, why did you take this step?
Bär  There were quite a few reasons – most importantly my deeply felt desire to bring more justice to the world. Look at the wonderful world of TikZducks fashion, and even Marmots have come far in the area of refinement. Why should TikZbears be left behind?

Ulrike  You are also concerned with the more momentous issues of our day.

Bär  Correct! My fashion line is the first ever to have practically no negative influence on our environment. Manufacture and transportation are ecologically neutral. In fact it's the first time in the history of world economy that goods are produced without the use of raw materials.

Ulrike  You claim that BearWear® will have a global impact.

Bär  Yes, the issue of globalization is one which has been interesting me for a long time. BearWear® caters for the needs of TikZbears all over the world. There is the Long-shirt Line for those who live near the poles, t-shirts for those in temperate regions and even a Muscle Shirt Line for the bears of Australia.

Ulrike  How about individuality?

Bär  I am particularly proud that BearWear® enables every single bear to create his own personal shirt – free of the dictates of the modern Brummells. He may use my suggestions but he need not do so.

Ulrike  Will you be seen wearing your own creations?

Bär  Well Ulrike, I am afraid this is not very likely. I have got this most beautiful fur and I'd hate to cover it with artificial patterns – no matter how ravishing.

Ulrike  One last question: what impulse got you moving towards BearWear®?

Bär  The death of Karl Lagerfeld. Someone had to fill the void.
