The `authortitle-terse` style

This style implements a terse author-title citation scheme suitable for both in-text citations and citations given in footnotes. It differs from the regular `authortitle` style in that the title is only printed if the bibliography contains more than one work by the respective author or editor.

Additional package options

The dashed option

By default, this style replaces recurrent authors/editors in the bibliography by a dash so that items by the same author or editor are visually grouped. This feature is controlled by the package option `dashed`. Setting `dashed=false` in the preamble will disable this feature. The default setting is `dashed=true`.
