The verbose-note style

This citation style is similar to verbose in that it prints a verbose citation similar to the full bibliography entry when an item is cited for the first time. All subsequent citations are pointers to the footnote containing the verbose citation. This style is exclusively intended for citations given in footnotes.

Additional package options

The pageref option

By default, this style does not add a page reference to the footnote pointers, i.e., they are rendered as ‘see note 3’. If you want such references to be rendered as ‘see note 3, page 5’ instead, set the package option pageref=true or simply pageref in the preamble. This will add the page number to the footnote pointer whenever the footnote to which the pointer refers is located on a different page or page spread (depending on the setting of the pagetracker option). The default setting is pageref=false.

The citepages option

Use this option to fine-tune the formatting of the pages and pagetotal fields in verbose citations. When an entry with a pages field is cited for the first time and the postnote is a page number or a page range, the citation will end with two page specifications:

In this example, “125” is the postnote and “100–150” is the pages field (there are similar issues with the pagetotal field). This may be confusing to the reader. The citepages option controls how to deal with these fields in this case. The option works as follows, given these citations as an example:

\cite{key}
\cite[a note]{key}
\cite[125]{key}

\citepages=permit allows duplicates, i.e., the style will print both the pages/pagetotal and the postnote. This is the default setting:

\citepages=suppress unconditionally suppresses the pages/pagetotal fields in citations, regardless of the postnote:

citepages=omit suppresses the pages/pagetotal in the third case only. They are still printed if there is no postnote or if the postnote is not a number or range:

citepages=separate separates the pages/pagetotal from the postnote in the third case:

The string “especially” in the third case is the bibliography string thiscite, which may be redefined.

The dashed option

By default, this style replaces recurrent authors/editors in the bibliography by a dash so that items by the same author or editor are visually grouped. This feature is controlled by the package option dashed. Setting dashed=false in the preamble will disable this feature. The default setting is dashed=true.
