The boxedminipage package*

A package for producing framed minipages.

Mario Wolczko, mario@acm.org

21 May 1992

The boxedminipage package is a \LaTeX\ package which defines the boxedminipage environment – like minipage, but with a frame around it. The thickness of the rules around the box is controlled by \texttt{\fboxrule}, and the distance between the rules and the edges of the inner box is governed by \texttt{\fboxsep}.

This code is based on Lamport’s minipage code.

Changes:
Fixed, 7 Jun 89 by Jerry Leichter – Leave \texttt{\fboxsep} worth of separation at top and bottom, not just at the sides!

\*This manual corresponds to boxedminipage v2, dated 21 May 1992.
