The \texttt{jneurosci} package\textasteriskcentered

Matthias Hennig (\url{hennig@cn.stir.ac.uk})

2004 April 06

This is a slightly modified version of the \texttt{namedplus} style, which fully conforms with the Journal of Neuroscience citation style.

The following citation labels are implemented:

\texttt{\citeauthoryear{\langle author-info\rangle}{\langle year\rangle}}: these labels are processed by the following commands:

\texttt{\cite{\langle key\rangle}}: which produces citations with both author and year, enclosed in parens.

\texttt{\shortcite{\langle key\rangle}}: which produces citations with year only, enclosed in parens

\texttt{\citeauthor{\langle key\rangle}}: which produces the author information only

\texttt{\citeyear{\langle key\rangle}}: which produces the year information only

\texttt{\citetext{\langle key\rangle}}: which produces Author (Year)

\texttt{\citenoparens{\langle key\rangle}}: which produces Author, Year

The output looks like that:

\texttt{\cite{\langle key\rangle}}: (Strettoi and Masland, 1996; Kolb, 1997; Masland, 2001) and (Fisher et al., 1975)

\texttt{\citetext{\langle key\rangle}}: for reviews, see McNaughton (1990); Müller and Kaupp (1998); Fain et al. (2001).

\textasteriskcentered\textsuperscript{*}This manual corresponds to \texttt{jneurosci} v1.00, dated 2004 April 06.
The bibliography follows J Neurosci conventions, e.g.:

This is a modified version of the namedplus style by:

A. David Redish 
Post-doc 
Neural Systems, Memory and Aging, Univ of AZ, Tucson AZ

which was in turn modified by:
Oren Patashnik (PATASHNIK@SCORE.STANFORD.EDU)

and finally modified by:
Matthias H Hennig, University of Edinburgh, mhennig@inf.ed.ac.uk
