The **numeric-comp** style

This style is similar to **numeric** except that a list of multiple citations is sorted and any sequence of more than two consecutive numbers is formatted as a range. This style will implicitly enable the **sortcites** package option at load time.

**Additional package options**

The **subentry** option

The option **subentry** affects the handling of citations referring to members of a reference set. If this option is enabled, such citations get an extra letter which identifies the member (it is also printed in the bibliography): [4a, 4c, 5, 7b, 7c]. This option is disabled by default, but it has been enabled in this example. If disabled, citations referring to a set member will point to the entire set, i.e., the above citations would come out as [4, 5, 7].

**Multiple citations**

<table>
<thead>
<tr>
<th>1</th>
<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>3</td>
</tr>
<tr>
<td>1</td>
<td>3</td>
</tr>
<tr>
<td>1</td>
<td>9</td>
</tr>
<tr>
<td>4b</td>
<td>7c</td>
</tr>
</tbody>
</table>

**Multiple citations with \supercite**
