The numeric-verb style

This style is similar to numeric except that a list of multiple citations is printed in a slightly more verbose format.

The subentry option

The option subentry affects the handling of citations referring to members of a reference set. If this option is enabled, such citations get an extra letter which identifies the member (it is also printed in the bibliography): \[4a\], \[7c\], \[4c\], \[7b\], \[5\].

This option is disabled by default, but it has been enabled in this example. If disabled, citations referring to a set member will point to the entire set, i.e., the above citations would come out as \[4\], \[7\], \[4\], \[7\], \[5\].

Multiple citations

\[6, \ 9, \ 1, \ 3, \ 7, \ 8, \ 2, \ 4\]
\[7c, \ 4c\]

Multiple citations with \textbackslash supercite

This is just filler text. 

This is just filler text.
