This is a test document demonstrating abbreviation styles provided by the \texttt{glossaries-extra} package. Hyperlinks are shown in \textcolor{magenta}{magenta}.

Some of the styles just use the default formatting commands (which don’t change the font). To make the default setting clearer, this document has done:

\renewcommand{\glslongdefaultfont}{\textsf{#1}}
\renewcommand{\glsabbrvdefaultfont}{\textsf{#1}}

So any text in this document that’s rendered in sans-serif would normally not have any font change implemented.

Each test entry is defined using

\begin{verbatim}
\newabbreviation[category=#1,user1={user text}]% 
{sample-#1}{short}{long form}%
\end{verbatim}

for the non-\texttt{-desc} styles or

\begin{verbatim}
\newabbreviation[category=#1,user1={user text},% 
description={sample description}]% 
{sample-#1}{short}{long form}%
\end{verbatim}

for the \texttt{-desc} styles (where \#1 is the style label). Note that many of the entries will have duplicate sort values, so don’t build this with \texttt{xindy}. You can change the ordering in the glossary to that it’s sorted according to the style name by changing the above definitions to:

\begin{verbatim}
\newabbreviation[category=#1,user1={user text},sort={#1}]% 
{sample-#1}{short}{long form}%
\end{verbatim}
\begin{verbatim}
\newabbreviation[category=#1,user1={user text},sort={#1},% 
description={sample description}]% 
{sample-#1}{short}{long form}%
\end{verbatim}

To assist with distinguishing between the various styles, the post-description hook (used after displaying the description in the glossary) is set to \texttt{\glsxtrabbrvfootnote} for all categories, and the footnote command \texttt{\glsxtrabbrvfootnote} has been redefined to include the short form hyperlinked to the glossary.

The test entries that use the \texttt{-hyphen} styles have had the \texttt{markwords} attribute set. This is designed to trigger compound word hyphenation if the inserted text (through the final optional argument of \texttt{\gls}) starts with a hyphen.

First use of $\texttt{\textbackslash gls\{label\}}[-\text{insert}]$. The conditional $\texttt{\textbackslash ifglsxtrinsertinside}$ is used by some styles to determine whether or not to include the inserted material inside the font changing command used by the style. The default is: false.

In this test chapter, each entry is reset, then displayed with

$\texttt{\textbackslash glsxtrinsertinsidefalse}$

then reset and displayed with

$\texttt{\textbackslash glsxtrinsertinsidetrue}$

(following the semi-colon). Some styles may only obey this conditional for particular commands. (For example, the inline commands like $\texttt{\textbackslash glsxtrfull}$ may behave differently to commands like $\texttt{\textbackslash gls}$.)

Some of the styles just use the default font commands (which don’t change the font) so there’s no noticeable difference. To make the differences more noticeable this document has done:

$\texttt{\renewcommand\{\glslongdefaultfont\}[1]\{\textsf{#1}\}}$

$\texttt{\renewcommand\{\glsabbrvdefaultfont\}[1]\{\textsf{#1}\}}$

Chapter 13

First Form With Insert

First form using \glsfirst{label}[-insert]. This is different from the first use of \gls as can be seen by the location of the inserted material. (There’s no check for the conditional \ifglsxtrinsertinside.) In general it’s best not to use \glsfirst with abbreviations. Use either \gls (possibly with a reset) or \glsxtrfull.

\begin{itemize}
  \item long-short: long form (short)-insert.
  \item short-long: short (long form)-insert.

Chapter 15

Summary

15.1 long-short

First use \texttt{\textbackslash{gls}}\{\texttt{label}\}: long form (short).
Next use \texttt{\textbackslash{gls}}\{\texttt{label}\}: short.
First use \texttt{\textbackslash{gls}}\{\texttt{label}\}[-insert]: long form-insert (short).
Next use \texttt{\textbackslash{gls}}\{\texttt{label}\}[-insert]: short-insert.
\texttt{\textbackslash{glsxtrfull}}\{\texttt{label}\}[-insert]: long form-insert (short).
\texttt{\textbackslash{glsxtrshort}}\{\texttt{label}\}[-insert]: short-insert.
\texttt{\textbackslash{glsxtrlong}}\{\texttt{label}\}[-insert]: long form-insert.
Name: short.
Sort: short.
Description: long form.

15.2 short-long

First use \texttt{\textbackslash{gls}}\{\texttt{label}\}: short (long form).
Next use \texttt{\textbackslash{gls}}\{\texttt{label}\}: short.
First use \texttt{\textbackslash{gls}}\{\texttt{label}\}[-insert]: short-insert (long form).
Next use \texttt{\textbackslash{gls}}\{\texttt{label}\}[-insert]: short-insert.
\texttt{\textbackslash{glsxtrfull}}\{\texttt{label}\}[-insert]: short-insert (long form).
\texttt{\textbackslash{glsxtrshort}}\{\texttt{label}\}[-insert]: short-insert.
\texttt{\textbackslash{glsxtrlong}}\{\texttt{label}\}[-insert]: long form-insert.
Name: short.
Sort: short.
Description: long form.
15.3 short-footnote

First use \gls{label}: short\textsuperscript{1}.
Next use \gls{label}: short.
First use \gls{label}\{-insert\}: short-insert\textsuperscript{2}.
Next use \gls{label}\{-insert\}: short-insert.
\glsxtrfull{label}\{-insert\}: short-insert (long form).
\glsxtrshort{label}\{-insert\}: short-insert.
\glsxtrlong{label}\{-insert\}: long form-insert.
Name: short.
Sort: short.
Description: long form.

15.4 short-postfootnote

First use \gls{label}: short\textsuperscript{3}.
Next use \gls{label}: short.
First use \gls{label}\{-insert\}: short-insert\textsuperscript{4}.
Next use \gls{label}\{-insert\}: short-insert.
\glsxtrfull{label}\{-insert\}: short-insert (long form).
\glsxtrshort{label}\{-insert\}: short-insert.
\glsxtrlong{label}\{-insert\}: long form-insert.
Name: short.
Sort: short.
Description: long form.

15.5 short-nolong

First use \gls{label}: short.
Next use \gls{label}: short.
First use \gls{label}\{-insert\}: short-insert.
Next use \gls{label}\{-insert\}: short-insert.
\glsxtrfull{label}\{-insert\}: short-insert (long form).
\glsxtrshort{label}\{-insert\}: short-insert.
\glsxtrlong{label}\{-insert\}: long form-insert.
Name: short.
Sort: short.
Description: long form.
