sample.
\printnoidxglossaries follows: ??

Glossary

\textbf{sample} an example 1

Too late to define an entry with the \texttt{docdef=restricted} setting. (Definitions must come before \texttt{printglossary}.)

New entry just defined: \texttt{sample2}. This will cause an error (or warning with \texttt{undefaction=warn}) in \texttt{\printnoidxglossaries}. This missing entry will cause a missing entry marker ?? at the start of the glossary (before the header).
